STIC-Biotech/ChemLib 117404

From: Rao, Manjunath N.
Sent: Monday, March 22, 2004 11:56 AM
To: STIC-Biotech/ChemLib
Subject: Sequence search request for 09/843,159

From: Manjunath N. Rao
Art Unit 1652, Room 3B-81
Mail Box in Room 3C-70
Phone: 272-0939

Date: 3-22-04

Please search the following as soon as possible for application with serial number **09/843,159**

SEQ ID NO: 1, and 2 against all **commercial nucleic acid databases** including **issued patents database** and **pending application database** and provide **a print of all results.**

SEQ ID NO:3 and 4 against all **commercial protein databases** including **issued patents database** and **pending application database** and provide **a print of all results.**

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   -!- FUNCTION: ANKYRINS ATTACH INTEGRAL MEMBRANE PROTEINS TO CYTO-
CC       SKELETAL ELEMENTS; THEY BIND TO THE ERYTHROCYTE MEMBRANE PROTEIN
CC       BAND 4.2, TO NA-K ATPASE, TO THE LYMPHOCYTE MEMBRANE PROTEIN GP85,
CC       AND TO THE CYTOSKELETAL PROTEINS FODRIN, TUBULIN, VIMENTIN AND
CC       DESMIN. ERYTHROCYTE ANKYRINS ALSO LINK SPECTRIN (BETA CHAIN) TO
CC       THE CYTOPLASMIC DOMAIN OF THE ERYTHROCYTES ANION EXCHANGE PROTEIN;
CC       THEY RETAIN MOST OR ALL OF THESE BINDING FUNCTIONS.
CC   -!- SUBCELLULAR LOCATION: PLASMA-MEMBRANE ASSOCIATED. ISOFORMS 7 AND 8
CC       ARE ASSOCIATED WITH THE LYSOSOMAL MEMBRANE.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=8;
CC         Comment=Additional isoforms seem to exist;
CC       Name=1;

CC   -!- FUNCTION: May regulate vesicle trafficking and modulate the
CC       subcellular distribution of SLC2A4/GLUT4-vesicles. Has PARP
CC       activity and can modify TRF1, and thereby contribute to the
CC       regulation of telomere length.
CC   -!- CATALYTIC ACTIVITY: NAD(+) + {ADP-D-ribosyl}(N)-acceptor =
CC       nicotinamide + {ADP-D-ribosyl}(N+1)-acceptor.
CC   -!- SUBUNIT: Oligomerizes and associates with TNKS. Interacts with the
CC       cytoplasmic domain of LNPEP/Otase in SLC2A4/GLUT4-vesicles. Binds
CC       to the N-terminus of Grb14 and TRF1 with its ankyrin repeat
CC       region.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic, associated with the Golgi and
CC       with juxtanuclear SLC2A4/GLUT4-vesicles. Also found around the
CC       pericentriolar matrix of mitotic centromeres. During interphase, a
CC       small fraction of TNKS2 is found in the nucleus, associated with
CC       TRF1.
CC   -!- TISSUE SPECIFICITY: Highly expressed in placenta, skeletal muscle,
CC       liver, brain, kidney, heart, thymus, spinal cord, lung, peripheral
CC       blood leukocytes, pancreas, lymph nodes, spleen, prostate, testis,
CC       ovary, small intestine, colon, mammary gland, breast and breast
CC       carcinoma, and in common-type meningioma. Highly expressed in
CC       fetal liver, heart and brain.
CC   -!- PTM: ADP-ribosylated (-auto).
CC   -!- SIMILARITY: Belongs to the PARP family.
CC   -!- SIMILARITY: Contains 15 ANK repeats.
CC   -!- SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.

CC       Name=2;
CC         IsoId=O95271-2; Sequence=VSP_004538, VSP_004539;
CC         Note=No experimental confirmation available;
CC   -!- TISSUE SPECIFICITY: Ubiquitous; highest levels in testis.
CC   -!- PTM: Upon insulin-stimulation, phosphorylated on serine residues
CC       by MAPK kinases.
CC   -!- PTM: ADP-ribosylated (-auto).
CC   -!- SIMILARITY: Belongs to the PARP family.
CC   -!- SIMILARITY: Contains 15 ANK repeats.
CC   -!- SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.

RT   "AnkyrinG. A new ankyrin gene with neural-specific isoforms localized
RT   at the axonal initial segment and node of Ranvier.";
RL   J. Biol. Chem. 270:2352-2359(1995).
```

```
CC   -!- FUNCTION: Membrane-cytoskeleton linker. The neural-specific
CC       isoforms may participate in the maintenance/targeting of ion
CC       channels and cell adhesion molecules at the nodes of Ranvier and
CC       axonal initial segments.
CC   -!- SUBUNIT: Neural-specific isoforms may be a constituent of a
CC       neurofascin/NRCAM/ankyrin G complex.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=1;
CC         Comment=A number of isoforms are produced;
CC       Name=1; Synonyms=480-kDa isoform;
CC         IsoId=Q12955-1; Sequence=Displayed;
CC   -!- TISSUE SPECIFICITY: Expressed in brain and other tissues. Isoform
CC       1 is neural-specific.
CC   -!- SIMILARITY: Contains 23 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.

CC   -!- FUNCTION: Attach integral membrane proteins to cytoskeletal
CC       elements; bind to the erythrocyte membrane protein band 4.2, to
CC       Na-K ATPase, to the lymphocyte membrane protein GP85, and to the
CC       cytoskeletal proteins fodrin, tubulin, vimentin and desmin.
CC       Erythrocyte ankyrins also link spectrin (beta chain) to the
CC       cytoplasmic domain of the erythrocytes anion exchange protein;
CC       they retain most or all of these binding functions.
CC   -!- SUBCELLULAR LOCATION: CYTOPLASMIC SURFACE OF ERYTHROCYTIC PLASMA
CC       MEMBRANE.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=3;
CC         Comment=Additional isoforms seem to exist;

RT   "Murine erythrocyte ankyrin cDNA: highly conserved regions of the
RT   regulatory domain.";
RL   Mamm. Genome 3:281-285(1992).
CC   -!- FUNCTION: Attach integral membrane proteins to cytoskeletal
CC       elements; bind to the erythrocyte membrane protein band 4.2, to
CC       Na-K ATPase, to the lymphocyte membrane protein GP85, and to the
CC       cytoskeletal proteins fodrin, tubulin, vimentin and desmin.
CC       Erythrocyte ankyrins also link spectrin (beta chain) to the
CC       cytoplasmic domain of the erythrocytes anion exchange protein;
CC       they retain most or all of these binding functions.
CC   -!- SUBCELLULAR LOCATION: CYTOPLASMIC SURFACE OF ERYTHROCYTIC
CC       PLASMA MEMBRANE.
CC   -!- PTM: Regulated by phosphorylation (By similarity).
CC   -!- PTM: Acylated by palmitic acid group(s) (By similarity).
CC   -!- SIMILARITY: Contains 23 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.
CC   ---------------------------------------------------------------------

CC   -!- FUNCTION: Binds to high-affinity receptors that are localized in
CC       the presynaptic plasma membrane of the nerve terminal. Binding of
CC       toxin results in calcium influx into nerve terminals, activation
CC       of synaptic vesicle exocytosis, and ATP depletion.
CC   -!- PTM: Alpha-latrotoxin may be processed at its C-terminus.
CC   -!- SIMILARITY: Contains 21 ANK repeats.

CC   -!- FUNCTION: Calcium/calmodulin-dependent serine/threonine kinase
CC       which acts as a positive regulator of apoptosis.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
CC   -!- COFACTOR: Magnesium.
CC   -!- ENZYME REGULATION: Negatively regulated by autophosphorylation on
CC       Ser-308.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic. Colocalizes with the actin
CC       filament system.
CC   -!- INDUCTION: Up-regulated following treatment with interferon-gamma.
CC   -!- SIMILARITY: Belongs to the Ser/Thr family of protein kinases. DAP
CC       kinase subfamily.
CC   -!- SIMILARITY: Contains 10 ANK repeats.
CC   -!- CAUTION: Ref.1 sequence differs from that shown due to
CC       frameshifts in positions 466 and 477.

RT   "Analysis of the mouse transcriptome based on functional annotation of
RT   60,770 full-length cDNAs.";
RL   Nature 420:563-573(2002).
CC   -!- FUNCTION: Calcium/calmodulin-dependent serine/threonine kinase.
CC       Isoform 1 is a negative regulator of apoptosis in direct contrast
CC       to its human homolog. Isoform 2 has no effect on apoptosis and its
CC       function is unknown.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
CC   -!- COFACTOR: Magnesium.
CC   -!- ENZYME REGULATION: Negatively regulated by autophosphorylation on
CC       Ser-308 (By similarity).
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=2;
CC       Name=1; Synonyms=Beta;
CC         IsoId=Q80YE7-1; Sequence=Displayed;
CC       Name=2; Synonyms=Alpha;
CC         IsoId=Q80YE7-2; Sequence=VSP_050629;
CC   -!- TISSUE SPECIFICITY: High levels in bladder, uterus, vas deferens,
CC       lung, liver and kidney.
CC   -!- SIMILARITY: Belongs to the Ser/Thr family of protein kinases. DAP
CC       kinase subfamily.
CC   -!- SIMILARITY: Contains 10 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.

CC   -!- FUNCTION: Not known. Its expression induces growth inhibition and
CC       chromatin condensation.
CC   -!- INDUCTION: By all-trans retinoic acid (ATRA).
CC   -!- SIMILARITY: Contains 12 ANK repeats.
CC   -!- SIMILARITY: Contains 1 SOCS box domain.

CC   -!- FUNCTION: Histone methyltransferase. Methylates Lys-9 of histone
CC       H3 (in vitro). H3 Lys-9 methylation represents a specific tag for
CC       epigenetic transcriptional repression by recruiting HP1 proteins
CC       to methylated histones. Probably targeted to histone H3 by
CC       different DNA-binding proteins like E2F6, MGA, MAX and/or DP1.
CC       During G0 phase, it probably contributes to silencing of MYC- and
CC       E2F-responsive genes, suggesting a role in G0/G1 transition in
CC       cell cycle.
CC   -!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + histone L-lysine =
CC       S-adenosyl-L-homocysteine + histone N(6)-methyl-L-lysine.
CC   -!- SUBUNIT: Part of the E2F6.com-1 complex in G0 phase composed of
CC       E2F6, MGA, MAX, TFDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR,
CC       L3MBTL2 and YAF2.
CC   -!- SUBCELLULAR LOCATION: Nuclear; associates with euchromatic
CC       regions.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=3;
CC         Comment=Experimental confirmation may be lacking for some
CC         isoforms;
CC       Name=1;
CC         IsoId=Q9H9B1-1; Sequence=Displayed;
CC       Name=2;
CC         IsoId=Q9H9B1-2; Sequence=VSP_002222, VSP_002223;
CC       Name=3;
CC         IsoId=Q9H9B1-3; Sequence=VSP_002224, VSP_002225;
CC   -!- TISSUE SPECIFICITY: Widely expressed.
CC   -!- SIMILARITY: Belongs to the histone-lysine methyltransferase
CC       family.
CC   -!- SIMILARITY: Contains 8 ANK repeats.
CC   -!- SIMILARITY: Contains 1 pre-SET domain.
CC   -!- SIMILARITY: Contains 1 SET domain.

CC -!- FUNCTION: May be a downstream target for TGF-beta1 signaling
CC cascade in endothelial cells (By similarity).
CC -!- SUBUNIT: Binds PP1 (Probable).
CC -!- SUBCELLULAR LOCATION: Attached to the plasma membrane (By
CC similarity).
CC -!- MISCELLANEOUS: Repressed by TGF-beta1 which requires denovo
CC protein synthesis and histone deacetylase (By similarity).
CC -!- SIMILARITY: Contains 5 ANK repeats.

CC   -!- FUNCTION: Inhibits protein phosphatase 1 activity toward
CC       phosphorylase, myosin light chain and myosin substrates.
CC   -!- SUBUNIT: Binds PP1.
CC   -!- SUBCELLULAR LOCATION: Attached to the plasma membrane (By
CC       similarity).
CC   -!- TISSUE SPECIFICITY: Highly expressed in testis, followed by liver,
CC       heart, brain and lung.
CC   -!- SIMILARITY: Contains 5 ANK repeats.

CC   -!- FUNCTION: Endoribonuclease, mediator of interferon action, which
CC       play a role in mediating resistance to virus infection and
CC       apoptosis. Might play a central role in the regulation of mRNA
CC       turnover.
CC   -!- CATALYTIC ACTIVITY: Cleaves 3' of UpNp dimers, with preference for
CC       UU and UA sequences, to sets of discrete products ranging from
CC       between 4 and 22 nucleotides in length.
CC   -!- COFACTOR: Optimal RNA cleavage rates requires the presence of
CC       either manganese or magnesium and ATP.
CC   -!- ENZYME REGULATION: After binding to 2-5A (5'-phosphorylated 2',5'-
CC       linked oligoadenylates) the homodimerization and subsequent
CC       activation occurs. Inhibited by RNase L inhibitor.
CC   -!- SUBUNIT: Monomer (inactive form) or homodimer.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic and mitochondrial.
CC   -!- TISSUE SPECIFICITY: Expressed in spleen, thymus, lung, testis,
CC       kidney, liver and heart.
CC   -!- INDUCTION: By interferons.
CC   -!- DOMAIN: A single active nuclease domain in a dimer is
CC       sufficient for ribonuclease activity.
CC   -!- DOMAIN: The kinase domain allows the homodimerization.
CC   -!- DOMAIN: The nine ankyrin repeats also called 2-5A sensor
CC       constitute the 2-5A binding domain.
CC   -!- SIMILARITY: Contains 9 ANK repeats.

```

```
CC   -!- FUNCTION: Histone methyltransferase. Preferentially methylates
CC       Lys-9 of histone H3 and Lys-27 of histone H3 (in vitro). H3 Lys-9
CC       methylation represents a specific tag for epigenetic
CC       transcriptional repression by recruiting HP1 proteins to
CC       methylated histones. Probably targeted to histone H3 by different
CC       DNA-binding proteins like E2F6, MGA, MAX and/or DP1. Also
CC       methylates histone H1 (By similarity).
CC   -!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + histone L-lysine =
CC       S-adenosyl-L-homocysteine + histone N(6)-methyl-L-lysine.
CC   -!- SUBUNIT: Part of the E2F6.com-1 complex in G0 phase composed of
CC       E2F6, MGA, MAX, TFDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR,
CC       L3MBTL2 and YAF2.
CC   -!- SUBCELLULAR LOCATION: Nuclear; associates with euchromatic
CC       regions. Does not associate with heterochromatin.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=3;
CC         Comment=Additional isoforms seem to exist;
CC       Name=1;
CC         IsoId=Q96KQ7-1; Sequence=Displayed;
CC       Name=2; Synonyms=NG36G9a-SPI;
CC         IsoId=Q96KQ7-2; Sequence=VSP_002211;
CC       Name=3; Synonyms=NG36;
CC         IsoId=Q96KQ7-3; Sequence=VSP_002212, VSP_002213;
CC   -!- TISSUE SPECIFICITY: Expressed in all tissues examined, with high
CC       levels in fetal liver, thymus, lymph node, spleen and peripheral
CC       blood leukocytes and lower level in bone marrow.
CC   -!- SIMILARITY: Belongs to the histone-lysine methyltransferase
CC       family. Suvar3-9 subfamily.
CC   -!- SIMILARITY: Contains 7 ANK repeats.
CC   -!- SIMILARITY: Contains 1 pre-SET domain.
CC   -!- SIMILARITY: Contains 1 SET domain.
CC   -!- SIMILARITY: Contains 1 post-SET domain.
CC   -!- CAUTION: NG36 and G9a were originally thought to derive from two
CC       separate genes. Ref.3 shows that all G9A transcripts also contain
CC       the in frame coding sequence of NG36.
CC   -!- CAUTION: Ref.1 and Ref.2 sequences differ from that shown due to
CC       erroneous gene model prediction.
CC   -!- CAUTION: It is not known whether Met-1 or Met-21 is the initiator
CC       methionine.

CC   -!- FUNCTION: Endoribonuclease, mediator of interferon action, which
CC       play a role in mediating resistance to virus infection and
CC       apoptosis. Might play a central role in the regulation of mRNA
CC       turnover.
CC   -!- CATALYTIC ACTIVITY: Cleaves 3' of UpNp dimers, with preference for
CC       UU and UA sequences, to sets of discrete products ranging from
CC       between 4 and 22 nucleotides in length.
CC   -!- COFACTOR: Optimal RNA cleavage rates requires the presence of
CC       either manganese or magnesium and ATP.
CC   -!- ENZYME REGULATION: After binding to 2-5A (5'-phosphorylated 2',5'-
CC       linked oligoadenylates) the homodimerization and subsequent
CC       activation occurs. Inhibited by RNase L inhibitor.
CC   -!- SUBUNIT: Monomer (inactive form) or homodimer.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic and mitochondrial.
CC   -!- TISSUE SPECIFICITY: Highly expressed in spleen and thymus followed
CC       by prostate, testis, uterus, small intestine, colon and peripheral
CC       blood leukocytes.
CC   -!- INDUCTION: By interferons.
CC   -!- DOMAIN: The kinase domain allows the homodimerization.
CC   -!- DOMAIN: The nine ankyrin repeats also called 2-5A sensor
CC       constitute the 2-5A binding domain.
CC   -!- DISEASE: Defects in RNASEL may be the cause of susceptibility to
CC       hereditary prostate cancer 1 (HPC1) [MIM:601518].
CC   -!- SIMILARITY: Contains 9 ANK repeats.

CC   -!- FUNCTION: P100 is the precursor of the p52 subunit of the nuclear
CC       factor NF-kappa-B, which binds to the kappa-B consensus sequence
CC       5'-GGRNNYYCC-3', located in the enhancer region of genes involved
CC       in immune response and acute phase reactions. The precursor
CC       protein itself does not bind to DNA. Isoform p49 is a subunit of
CC       the NF-kappa-B protein complex, which stimulates the HIV enhancer
CC       in synergy with p65.
CC   -!- SUBUNIT: Active NF-kappa-B is a heterodimer of an about 52 kDa
CC       DNA-binding subunit and the weak DNA-binding subunit p65. Two
CC       heterodimers might form a labile tetramer.
CC   -!- SUBCELLULAR LOCATION: Nuclear, but also found in the cytoplasm in
```

```
CC       an inactive form complexed to an inhibitor (I-kappa-B).
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=2;
CC       Name=p100;
CC         IsoId=Q00653-1; Sequence=Displayed;
CC       Name=p49;
CC         IsoId=Q00653-2; Sequence=VSP_005585, VSP_005586;
CC   -!- DOMAIN: The C-terminus of p100 might be involved in cytoplasmic
CC       retention, inhibition of DNA-binding by p52 homodimers, and/or
CC       transcription activation (By similarity).
CC   -!- DISEASE: In cutaneous T-cell leukemia (CTCL) cell line HUT 78, a
CC       rearranged NFKB2 gene is found which encodes for a truncated 80
CC       kDa protein (p80HT).
CC   -!- SIMILARITY: Belongs to the Rel/Dorsal family.
CC   -!- SIMILARITY: Contains 7 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.
CC   -!- DATABASE: NAME=Atlas Genet. Cytogenet. Oncol. Haematol.;
CC       WWW="http://www.infobiogen.fr/services/chromcancer/Genes/NFKB2ID362.html".

CC   -!- FUNCTION: Histone methyltransferase. Preferentially methylates
CC       Lys-9 of histone H3 and Lys-27 of histone H3 (in vitro). H3 Lys-9
CC       methylation represents a specific tag for epigenetic
CC       transcriptional repression by recruiting HP1 proteins to
CC       methylated histones. Also methylates histone H1.
CC   -!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + histone L-lysine =
CC       S-adenosyl-L-homocysteine + histone N(6)-methyl-L-lysine.
CC   -!- SUBUNIT: Part of the E2F6.com-1 complex in G0 phase composed of
CC       E2F6, MGA, MAX, TFDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR,
CC       L3MBTL2 and YAF2 (By similarity).
CC   -!- SUBCELLULAR LOCATION: Nuclear; almost excluded form nucleoli.
CC       Associates with euchromatic regions. Does not associate with
CC       heterochromatin.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=2;
CC       Name=1; Synonyms=G9a-L;
CC         IsoId=Q9Z148-1; Sequence=Displayed;
CC       Name=2; Synonyms=G9a-S;
CC         IsoId=Q9Z148-2; Sequence=VSP_002214, VSP_002215, VSP_002216;
CC   -!- MISCELLANEOUS: G9A deficient mice show a higher level of histone
CC       H3 with acetylated Lys-9 and/or methylated Lys-4, display severe
CC       developmental defects and die within E9.5-E12.5 stages.
CC   -!- SIMILARITY: Belongs to the histone-lysine methyltransferase
CC       family. Suvar3-9 subfamily.
CC   -!- SIMILARITY: Contains 7 ANK repeats.
CC   -!- SIMILARITY: Contains 1 pre-SET domain.
CC   -!- SIMILARITY: Contains 1 SET domain.
CC   -!- SIMILARITY: Contains 1 post-SET domain.
CC   -!- CAUTION: NG36 and G9a were originally thought to derive from two
CC       separate genes.
CC   -!- CAUTION: Ref.1 sequences differ from that shown due to erroneous
CC       gene model prediction.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 6
US-09-972-115A-4
; Sequence 4, Application US/09972115A
; Patent No. 6599728
; GENERAL INFORMATION:
; APPLICANT: Geron Corporation
; APPLICANT: Gregg, Morin B.
; APPLICANT: Walter, Funk D.
; APPLICANT: Mieczyslaw, Piatyszek A.
; TITLE OF INVENTION: A Second Mammalian Telomerase
; FILE REFERENCE: 080/003C
; CURRENT APPLICATION NUMBER: US/09/972,115A
; CURRENT FILING DATE: 2001-10-05
; PRIOR APPLICATION NUMBER: US 60/128,577
; PRIOR FILING DATE: 2000-04-10
; PRIOR APPLICATION NUMBER: US 60/129,123
; PRIOR FILING DATE: 1999-04-13
; NUMBER OF SEQ ID NOS: 64
; SOFTWARE: PatentIn version 3.1
; SEQ ID NO 4
; LENGTH: 1267
; TYPE: PRT
; ORGANISM: Homo sapiens
; FEATURE:
; NAME/KEY: misc_feature
; LOCATION: (1)..(1)
; OTHER INFORMATION: The 'Xaa' at location 1 stands for Thr, Ala, Pro, or Ser.
; NAME/KEY: misc_feature
; LOCATION: (42)..(42)
; OTHER INFORMATION: The 'Xaa' at location 42 stands for Lys, Arg, Thr, or Met.
; NAME/KEY: misc_feature
; LOCATION: (98)..(98)
; OTHER INFORMATION: The 'Xaa' at location 98 stands for Lys, Arg, Thr, or Met.
; NAME/KEY: misc_feature
; LOCATION: (110)..(110)
; OTHER INFORMATION: The 'Xaa' at location 110 stands for Thr, Ala, Pro, or Ser.
; NAME/KEY: misc_feature
; LOCATION: (114)..(114)
; OTHER INFORMATION: The 'Xaa' at location 114 stands for Asn, Ser, Thr, or Ile.
; NAME/KEY: misc_feature
; LOCATION: (126)..(126)
; OTHER INFORMATION: The 'Xaa' at location 126 stands for Lys, or Asn.
; NAME/KEY: misc_feature
; LOCATION: (139)..(139)
; OTHER INFORMATION: The 'Xaa' at location 139 stands for Ile, Val, Leu, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (144)..(144)
; OTHER INFORMATION: The 'Xaa' at location 144 stands for Thr.
; NAME/KEY: misc_feature
; LOCATION: (153)..(153)
; OTHER INFORMATION: The 'Xaa' at location 153 stands for Thr.
; NAME/KEY: misc_feature
; LOCATION: (166)..(166)
; OTHER INFORMATION: The 'Xaa' at location 166 stands for Ser, Gly, Arg, or Cys.
; NAME/KEY: misc_feature
; LOCATION: (173)..(173)
; OTHER INFORMATION: The 'Xaa' at location 173 stands for Ile, Val, Leu, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (174)..(174)
; OTHER INFORMATION: The 'Xaa' at location 174 stands for Glu, or Lys.
; NAME/KEY: misc_feature
; LOCATION: (183)..(183)
; OTHER INFORMATION: The 'Xaa' at location 183 stands for Val.
; NAME/KEY: misc_feature
; LOCATION: (185)..(185)
; OTHER INFORMATION: The 'Xaa' at location 185 stands for Thr, Ala, Pro, or Ser.
; NAME/KEY: misc_feature
; LOCATION: (188)..(188)
; OTHER INFORMATION: The 'Xaa' at location 188 stands for Asn, Asp, His, or Tyr.
; NAME/KEY: misc_feature
; LOCATION: (202)..(202)
; OTHER INFORMATION: The 'Xaa' at location 202 stands for His, or Pro.
; NAME/KEY: misc_feature
; LOCATION: (204)..(204)
; OTHER INFORMATION: The 'Xaa' at location 204 stands for Glu, or Lys.
; NAME/KEY: misc_feature
; LOCATION: (205)..(205)
; OTHER INFORMATION: The 'Xaa' at location 205 stands for Asn, Ser, Thr, or Ile.
; NAME/KEY: misc_feature
; LOCATION: (207)..(207)
; OTHER INFORMATION: The 'Xaa' at location 207 stands for Asn, Asp, His, or Tyr.
; NAME/KEY: misc_feature
; LOCATION: (211)..(211)
; OTHER INFORMATION: The 'Xaa' at location 211 stands for Gln, Arg, Pro, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (213)..(213)
; OTHER INFORMATION: The 'Xaa' at location 213 stands for Ser, Gly, Arg, or Cys.
; NAME/KEY: misc_feature

; LOCATION: (215)..(215)
; OTHER INFORMATION: The 'Xaa' at location 215 stands for Lys, Asn, Glu, Asp, Gln, His
; OTHER INFORMATION: , a stop codon, or Tyr.
; NAME/KEY: misc_feature
; LOCATION: (227)..(227)
; OTHER INFORMATION: The 'Xaa' at location 227 stands for His, Arg, Pro, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (228)..(228)
; OTHER INFORMATION: The 'Xaa' at location 228 stands for Asn, Asp, His, or Tyr.
; NAME/KEY: misc_feature
; LOCATION: (237)..(237)
; OTHER INFORMATION: The 'Xaa' at location 237 stands for Glu, or Asp.
; NAME/KEY: misc_feature
; LOCATION: (238)..(238)
; OTHER INFORMATION: The 'Xaa' at location 238 stands for Asn, Ser, Thr, Ile, Asp, Gly
; OTHER INFORMATION: , Ala, Val, His, Arg, Pro, Leu, Tyr, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (667)..(667)
; OTHER INFORMATION: The 'Xaa' at location 667 stands for Tyr, Cys, Ser, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (725)..(725)
; OTHER INFORMATION: The 'Xaa' at location 725 stands for Lys, or Asn.
; NAME/KEY: misc_feature
; LOCATION: (727)..(727)
; OTHER INFORMATION: The 'Xaa' at location 727 stands for His, Arg, Pro, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (735)..(735)
; OTHER INFORMATION: The 'Xaa' at location 735 stands for Glu, or Asp.
; NAME/KEY: misc_feature
; LOCATION: (741)..(741)
; OTHER INFORMATION: The 'Xaa' at location 741 stands for Met, Val, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (763)..(763)
; OTHER INFORMATION: The 'Xaa' at location 763 stands for Leu, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (764)..(764)
; OTHER INFORMATION: The 'Xaa' at location 764 stands for Tyr, Cys, Ser, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (787)..(787)
; OTHER INFORMATION: The 'Xaa' at location 787 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (788)..(788)
; OTHER INFORMATION: The 'Xaa' at location 788 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (789)..(789)
; OTHER INFORMATION: The 'Xaa' at location 789 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (790)..(790)
; OTHER INFORMATION: The 'Xaa' at location 790 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (791)..(791)
; OTHER INFORMATION: The 'Xaa' at location 791 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (792)..(792)
; OTHER INFORMATION: The 'Xaa' at location 792 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (793)..(793)
; OTHER INFORMATION: The 'Xaa' at location 793 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (794)..(794)
; OTHER INFORMATION: The 'Xaa' at location 794 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (795)..(795)
; OTHER INFORMATION: The 'Xaa' at location 795 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (796)..(796)
; OTHER INFORMATION: The 'Xaa' at location 796 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (797)..(797)
; OTHER INFORMATION: The 'Xaa' at location 797 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (798)..(798)
; OTHER INFORMATION: The 'Xaa' at location 798 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (799)..(799)
; OTHER INFORMATION: The 'Xaa' at location 799 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (800)..(800)
; OTHER INFORMATION: The 'Xaa' at location 800 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (801)..(801)
; OTHER INFORMATION: The 'Xaa' at location 801 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.

RESULT 10
US-09-972-115A-2
; Sequence 2, Application US/09972115A
; Patent No. 6599728
; GENERAL INFORMATION:
;  APPLICANT: Geron Corporation
;  APPLICANT:  Gregg, Morin B.
;  APPLICANT:  Walter, Funk D.
;  APPLICANT:  Mieczyslaw, Piatyszek A.
;  TITLE OF INVENTION: A Second Mammalian Telomerase
;  FILE REFERENCE: 080/003C
;  CURRENT APPLICATION NUMBER: US/09/972,115A
;  CURRENT FILING DATE:  2001-10-05
;  PRIOR APPLICATION NUMBER: US 60/128,577
;  PRIOR FILING DATE: 2000-04-10
;  PRIOR APPLICATION NUMBER: US 60/129,123
;  PRIOR FILING DATE: 1999-04-13
;  NUMBER OF SEQ ID NOS: 64
;  SOFTWARE: PatentIn version 3.1
; SEQ ID NO 2
;   LENGTH: 1333
;   TYPE: PRT
;   ORGANISM: Homo sapiens
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (1)..(1)
;   OTHER INFORMATION: The 'Xaa' at location 1 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (2)..(2)
;   OTHER INFORMATION: The 'Xaa' at location 2 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (3)..(3)
;   OTHER INFORMATION: The 'Xaa' at location 3 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (4)..(4)
;   OTHER INFORMATION: The 'Xaa' at location 4 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (5)..(5)
;   OTHER INFORMATION: The 'Xaa' at location 5 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (6)..(6)
;   OTHER INFORMATION: The 'Xaa' at location 6 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (7)..(7)
;   OTHER INFORMATION: The 'Xaa' at location 7 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (8)..(8)
;   OTHER INFORMATION: The 'Xaa' at location 8 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (9)..(9)
;   OTHER INFORMATION: The 'Xaa' at location 9 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (10)..(10)
;   OTHER INFORMATION: The 'Xaa' at location 10 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (11)..(11)
;   OTHER INFORMATION: The 'Xaa' at location 11 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (12)..(12)
;   OTHER INFORMATION: The 'Xaa' at location 12 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (13)..(13)
;   OTHER INFORMATION: The 'Xaa' at location 13 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (14)..(14)
;   OTHER INFORMATION: The 'Xaa' at location 14 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (15)..(15)
;   OTHER INFORMATION: The 'Xaa' at location 15 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (16)..(16)
;   OTHER INFORMATION: The 'Xaa' at location 16 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (17)..(17)
;   OTHER INFORMATION: The 'Xaa' at location 17 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (18)..(18)
;   OTHER INFORMATION: The 'Xaa' at location 18 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (19)..(19)
;   OTHER INFORMATION: The 'Xaa' at location 19 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (20)..(20)
;   OTHER INFORMATION: The 'Xaa' at location 20 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (21)..(21)
;   OTHER INFORMATION: The 'Xaa' at location 21 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (22)..(22)
;   OTHER INFORMATION: The 'Xaa' at location 22 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (23)..(23)
;   OTHER INFORMATION: The 'Xaa' at location 23 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing
PT or preventing cell proliferation in cells, and for diagnosing, treating
PT or preventing cell cycle associated disorders such as cancer.
XX
PS Claim 22; Fig 4; 63pp; English.
XX
CC This sequence is the Tankyrase homologue isotype 2 (TaHo-2) protein of
CC the invention. The invention also relates to the TaHo-2 protein. The TaHo
CC proteins are useful for inducing or preventing cell proliferation in
CC cells, and in the study or treatment of conditions mediated by the cell
CC cycle proteins, such as to diagnose, treat or prevent cell cycle
CC associated disorders, preferably cancer. The TaHo coding sequences are
CC useful as hybridisation probes, in chromosome and gene mapping and in the
CC generation of anti-sense DNA and RNA. The coding sequences are also
CC useful for the preparation of TaHo, for generating either transgenic
CC animals or knock out animals which, in turn, are useful in a development
CC and screening of therapeutically useful agents, in gene therapy, as

CC vaccine, and for construction of hybridisation probes for mapping the
CC gene which encodes TaHo and for the genetic analysis of individuals with
CC genetic disorders. The TaHo proteins, and their coding sequences are
CC useful in screening assays

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Claim 14; Fig 4; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This
CC sequence represents the tankyrase H isoform 2, TaHo-2, isolated from
CC clone K23 which is described in the disclosure of the invention

CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT the polypeptide useful for modulating or maintaining telomere length,
PT replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS Claim 4; Fig 4; 52pp; English.
XX
CC The present sequence is a version of the human tankyrase II protein
CC sequence. The protein is thought to be involved in signal transduction in
CC the cell, and to have binding activity for other telomere-associated
CC proteins. It is possible that it plays a role in the regulation of
CC telomere length, thus affecting the replicative ability of the cell. The
CC protein is useful for ribosylating target proteins, for determining
CC tankyrase II binding activity in a sample, and for modulating telomere
CC length in a cell

PT New polynucleotides comprising sequences assembled from expressed
PT sequence tags (ESTs), useful for treating cell-proliferative,
PT neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or platelet
PT or coagulation disorders.
XX
PS Claim 9; SEQ ID NO 1504; 1012pp + Sequence Listing; English.
XX
CC The invention relates to an isolated polynucleotide (I) comprising a
CC nucleotide sequence selected from any of 948 sequences (ABZ11119-
CC ABZ12066) or their mature protein coding portion, active domain coding
CC protein or complementary sequences. The polynucleotides are useful for
CC identifying expressed genes or for physical mapping of human genome. The
CC encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight
CC markers, as a food supplement, for generating antibodies, in medical
CC imaging, screening and diagnostic assays and for treating cell-
CC proliferative disorders (cancer), neurodegenerative diseases (Parkinson's
CC or Alzheimer's disease), autoimmune diseases (multiple sclerosis,
CC diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,
CC platelet or coagulation disorders, wound, burns, incision, ulcers, liver
CC or lung fibrosis, infections (bacterial, viral, fungal, parasitic),
CC arthritis, etc. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New tankyrase homolog protein (THP) polynucleotide and polypeptide useful
PT   in gene therapy, diagnosis and treatment or prevention of unregulated
PT   cell growth, such as cancer or tumor cell growth.
XX
PS   Claim 20; Page 50-54; 60pp; English.
XX
CC   The present sequence is human tankyrase homolog protein (THP). The THP
CC   polypeptides and polynucleotides of the invention are useful in gene
CC   therapy and for treating or preventing unregulated cell growth such as
CC   cancer or tumour (e.g. basal cell carcinoma). The nucleic acid molecules
CC   of the invention and their fragments are useful for restriction fragment
CC   length polymorphism (RFLP) associated with certain disorders, as well as
CC   for genetic mapping. Antisense oligonucleotides, or fragments of nucleic
CC   acid encoding THP are useful as diagnostic tools for probing the
CC   expression of Thp gene in various tissues. THP can be used as antigens
CC   for raising antibodies against them and in assays for identifying
CC   compounds that modulate their activity. They are used in the manufacture
CC   of a medicament directed towards cancers or tumours. THP are also useful
CC   for screening compounds in a variety of drugs screening techniques and as
CC   a research tool for identification, characterisation and purification of
CC   interacting, regulatory proteins

PT Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing
PT or preventing cell proliferation in cells, and for diagnosing, treating
PT or preventing cell cycle associated disorders such as cancer.
XX
PS Claim 22; Fig 3; 63pp; English.
XX
CC This sequence is the Tankyrase homologue isotype 1 (TaHo-1) protein of
CC the invention. The invention also relates to the TaHo-2 protein. The TaHo
CC proteins are useful for inducing or preventing cell proliferation in
CC cells, and in the study or treatment of conditions mediated by the cell
CC cycle proteins, such as to diagnose, treat or prevent cell cycle
CC associated disorders, preferably cancer. The TaHo coding sequences are
CC useful as hybridisation probes, in chromosome and gene mapping and in the
CC generation of anti-sense DNA and RNA. The coding sequences are also
CC useful for the preparation of TaHo, for generating either transgenic
CC animals or knock out animals which, in turn, are useful in a development
CC and screening of therapeutically useful agents, in gene therapy, as
CC vaccine, and for construction of hybridisation probes for mapping the
CC gene which encodes TaHo and for the genetic analysis of individuals with
CC genetic disorders. The TaHo proteins, and their coding sequences are
CC useful in screening assays

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Disclosure; Fig 16A-C; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This
CC sequence represents tankyrase H isoform 1, TH-1, described in the
CC disclosure of the invention

XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents the tankyrase H isoform 1, TaHo-1, isolated from
CC   clone TH-1 which is described in the disclosure of the invention

CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents the tankyrase H isoform 1, TH-1 variant Taho F/L
CC   described in the disclosure of the invention

PT   New recombinant nucleic acid encoding a cell cycle protein, useful for
PT   diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS   Disclosure; Fig 16A-C; 90pp; English.
XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents the tankyrase H isoform 1, Taho E/A dC, which
CC   contains a Glu to Ala mutation and has a truncated C-terminal containing
CC   a 2 amino acid insertion described in the disclosure of the invention

PT New candidate effector for the Grb7 family of signaling proteins, and
PT specific antibody, useful for detection and treatment of cancer.
XX
PS Claim 9; Fig 1; 24pp; English.
XX
CC The present sequence represents a novel candidate effector for the Grb7
CC family of signalling proteins, termed 2.2412. The sequence is predicted
CC from a partial cDNA (see AAX25366). 2.2412 mRNA transcripts (7 kb) were
CC detected in all tissues examined with the exception of kidney. Expression
CC was particularly high in skeletal muscle and placenta. Analysis of the
CC sequence revealed significant homology to a large number of proteins
CC containing ankyrin-like repeats. The 2.2412 gene was localised to between
CC chromosome 10q23.2 and proximal 10q23.32. Deletions in the 10q22-25
CC region have been detected in human breast, prostate, renal, small cell
CC lung and endometrial carcinomas, glioblastoma multiforme, melanoma and
CC meningiomas. Detection of the protein encoded by the 2.2412 cDNA in a
CC sample should provide a useful tumour marker and/or prognostic indicator
CC for certain human cancers, in particular breast cancer and prostate
CC cancer. Antagonism of the interaction between Grb7 family members and the
CC encoded protein should provide a novel treatment stategy for human
CC diseases exhibiting aberrant receptor tyrosine kinase signalling, such as
CC cancer. Anti-Grb7 antibodies can be used in methods of detecting the
CC presence of 2.2412 protein in a sample

PT   New insulin signaling protein SPANK, useful for reducing body mass,
PT   glucose intolerance or insulin resistance and for preventing or treating
PT   obesity-related and muscle-related diseases.
XX
PS   Claim 3; Fig 3; 65pp; English.
XX
CC   This sequence represents human SPANK. The SPANK protein comprises 3
CC   domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP (poly
CC   adenosine diphosphate-ribose polymerase) catalytic domain; and (c) an ANK
CC   domain composed of ankyrin repeats. SPANK is a cytosolic protein which
CC   can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC   aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC   perinuclear region of adipocytes. It is an effector in the insulin
CC   signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC   mass, reducing glucose intolerance or insulin resistance, for preventing
CC   or treating obesity-related diseases or disorders, such as obesity,
CC   cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC   atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC   dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC   also useful for preventing or treating muscle-related diseases or
CC   disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC   Antibodies immunospecific for SPANK are useful for detecting the presence
CC   of SPANK polypeptide in a biological sample

PT   Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT   the polypeptide useful for modulating or maintaining telomere length,
PT   replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS   Disclosure; Fig 3; 52pp; English.
XX
CC   The present sequence is a version of the human tankyrase II protein
CC   sequence. The protein is thought to be involved in signal transduction in
CC   the cell, and to have binding activity for other telomere-associated
CC   proteins. It is possible that it plays a role in the regulation of
CC   telomere length, thus affecting the replicative ability of the cell. The
CC   protein is useful for ribosylating target proteins, for determining
CC   tankyrase II binding activity in a sample, and for modulating telomere
CC   length in a cell

PT   Diagnosing colon cancer in a subject comprises identifying colon cancer-
PT   associated polypeptides as antigens that elicit immune response in colon
PT   cancer.
XX
PS   Example 1; Page 118-121; 122pp; English.
XX
CC   The invention relates to a method for diagnosing colon cancer in a
CC   subject which comprises identifying colon cancer-associated polypeptides
CC   as antigens that elicit immune response in colon cancer. The method is
CC   useful for diagnosing, determining onset, progression, or regression of
CC   colon cancer in a subject, or for selecting a course of treatment of a
CC   subject having or suspected of having colon cancer. The colon cancer-
CC   associated polypeptides are useful as markers for diagnosing colon
CC   cancer, and for following the course of treatment of colon cancer. The
CC   present sequence is human colon cancer-associated polypeptide

PT   New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT   length, used to identify modulators, e.g. for inhibiting growth of
PT   cancer.
XX
PS   Claim 1; Fig 1B; 133pp; English.
XX
CC   The present sequence is human tankyrase, a TRF1 (telomeric repeat binding
CC   factor-1) binding protein. This was isolated using a two-hybrid screen
CC   with TRF1. Tankyrase is involved in regulation of telomere length through
CC   TRF1 and may directly modulate the effect of TRF1. Recombinant tankyrase,
CC   or its fragments are used to identify specific modulators which are
CC   potential drugs for countering telomere shortening associated with aging
CC   (e.g. atrophy of skin, macular degeneration or atherosclerosis) or
CC   diseases like ataxia telangiectasia. They are also used to raise specific
CC   antibodies (used as immunoassay reagents and as modulators of tankyrase
CC   activity) and in rational drug design

PT Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT the polypeptide useful for modulating or maintaining telomere length,
PT replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS Claim 4; Fig 5; 52pp; English.
XX
CC The present sequence is a version of the human tankyrase I protein
CC sequence. The invention relates to the isoaltion of the protein and
CC coding sequences of human tankyrase II. This protein is thought to be
CC involved in signal transduction in the cell, and to have binding activity
CC for other telomere-associated proteins. It is possible that it plays a
CC role in the regulation of telomere length, thus affecting the replicative
CC ability of the cell. The protein is useful for ribosylating target
CC proteins, for determining tankyrase II binding activity in a sample, and
CC for modulating telomere length in a cell

PS Example 1; Page 118-121; 242pp; English.

```
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT   to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT   ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT   -ribosylation activity.
XX
PS   Claim 3; Fig 1B; 151pp; English.
XX
CC   The invention discloses a nuclear localisation signal (NLS)-telomeric
CC   protein tankyrase that comprises a NLS and at least a portion of a
CC   tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC   factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC   Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC   TRF1, which is a negative regulator of telomere length maintenance, and
CC   in so doing, counteracts its effect and play a role in lifecycle of a
CC   cell. The protein is useful for identifying agents that modulate the
CC   binding of TRF1 to its DNA binding site, for identifying agents that
CC   modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC   identifying the agents that modulate telomere length and for identifying
CC   agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC   the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC   would hinder telomere lengthening and so is useful in the treatment of
CC   cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC   telomere lengthening and so could be useful for extending the lifetime of
CC   the cell, especially self-renewing cells such as bone marrow cells,
CC   peripheral blood, T and B cells. Tankyrases are also useful for
CC   developing drugs that can counteract the telomere shortening associated
CC   with aging and certain diseases such as ataxia telangiectasia. The
CC   sequence presented is the human tankyrase

PT   Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT   the polypeptide useful for modulating or maintaining telomere length,
PT   replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS   Disclosure; Fig 2; 52pp; English.
XX
CC   The present sequence is a version of the human tankyrase II protein
CC   sequence. The protein is thought to be involved in signal transduction in
CC   the cell, and to have binding activity for other telomere-associated
CC   proteins. It is possible that it plays a role in the regulation of
CC   telomere length, thus affecting the replicative ability of the cell. The
CC   protein is useful for ribosylating target proteins, for determining
CC   tankyrase II binding activity in a sample, and for modulating telomere
CC   length in a cell

PT   New insulin signaling protein SPANK, useful for reducing body mass,
PT   glucose intolerance or insulin resistance and for preventing or treating
PT   obesity-related and muscle-related diseases.
XX
PS   Claim 3; Fig 5B; 65pp; English.
XX
CC   This sequence represents the mouse SPANK protein. The SPANK protein
CC   comprises 3 domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP
CC   (poly adenosine diphosphate-ribose polymerase) catalytic domain; and (c)
CC   an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein
CC   which can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC   aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC   perinuclear region of adipocytes. It is an effector in the insulin
CC   signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC   mass, reducing glucose intolerance or insulin resistance, for preventing
CC   or treating obesity-related diseases or disorders, such as obesity,
CC   cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC   atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC   dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC   also useful for preventing or treating muscle-related diseases or
CC   disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC   Antibodies immunospecific for SPANK are useful for detecting the presence
CC   of SPANK polypeptide in a biological sample

XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 1; Page 144-146; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   New isolated nucleic acid detection reagent for detecting 1000 or more
PT   genes from Drosophila and for elucidating cell signaling and cell-cell
PT   interactions.
XX
PS   Disclosure; SEQ ID NO 9474; 21pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
```

```
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
CC   insecticides, therapeutics and pharmaceutical drugs. The invention
CC   discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC   sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC   ABB72072). The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 2; Page 215-218; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   New transgenic fly, containing DNA encoding an Abeta portion of human
PT   APP, useful for identifying agents which modulate the APP pathway and
PT   which can be used to treat Alzheimer's disease.
XX
PS   Example 4; Page 113-114; 129pp; English.
XX
CC   The invention relates to a transgenic fly whose genome comprises DNA
CC   encoding a polypeptide having the Abeta portion of human amyloid
CC   precursor protein (APP), fused to a signal sequence. The DNA sequence
CC   encodes a 123 (Abeta40) or 129 (Abeta42) amino acid sequence, given in
CC   the specification. The DNA sequence is operably linked to a tissue-
CC   specific expression control sequence. Expression of the sequence gives
CC   the fly an altered phenotype. The purpose of the invention is for
CC   identifying agents that inhibit or promote the expression and/or function
CC   of genes or encoded polypeptides which modify the APP pathway. The agent
CC   is a compound, triple helix DNA, antisense oligonucleotide, double
CC   stranded RNA molecule, ribozyme, or particularly an antibody. It is used
CC   to treat conditions such as Alzheimer's disease. The agent can be used as
CC   an APP pathway modulator or in gene therapy. This sequence represents the
CC   protein of the APP related human homologue hCP33787

PT New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT length, used to identify modulators, e.g. for inhibiting growth of
PT cancer.
XX
PS Disclosure; Page 125-129; 133pp; English.
XX
CC The present sequence is truncated human tankyrase, a TRF1 (telomeric
CC repeat binding factor-1) binding protein. This comprises 1-881 residues
CC of human tankyrase. Tankyrase is involved in regulation of telomere
CC length through TRF1 and may directly modulate the effect of TRF1.
CC Recombinant tankyrase, or its fragments are used to identify specific
CC modulators which are potential drugs for countering telomere shortening
CC associated with aging (e.g. atrophy of skin, macular degeneration or
CC atherosclerosis) or diseases like ataxia telangiectasia. They are also
CC used to raise specific antibodies (used as immunoassay reagents and as
CC modulators of tankyrase activity) and in rational drug design

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Disclosure; Page 146-148; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC protein sequence presented is the truncated human tankyrase #2. Note:
CC Residues 1-881 are the same as the wild-type human tankyrase sequence

PT   New recombinant nucleic acid encoding a cell cycle protein, useful for
PT   diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS   Disclosure; Fig 16A-C; 90pp; English.
XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents the tankyrase H isoform TH-1 variant TaHo C which
CC   contains a C-terminus deletion and a 28 amino acid insertion due to a
CC   frame shift described in the disclosure of the invention

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 156-157; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT Human proteins and DNA encoding sequences useful for preventing, treating
PT or ameliorating a medical condition in a mammalian subject e.g. arthritis
PT and cancer.
XX
PS Claim 20; Page 165-166; 1963pp; English.
XX
CC Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The
CC invention also relates to vectors and recombinant host cells comprising a
CC nucleotide of the invention, methods of producing the novel polypeptides,
CC antibodies against the polypeptides, methods of detecting the nucleotides
CC or polypeptides in a sample, and methods of identifying compounds which
CC bind to polypeptides of the invention. Although novel, many of the
CC polypeptides of the invention have homology to known proteins, thereby
CC giving an insight into their probable biological activities, and hence
CC potential therapeutic applications. The polypeptides of the invention may
CC have various activities, including cytokine, cell proliferation or cell
CC differentiation activities; stem cell growth factor activity;
CC haematopoiesis regulatory activity; tissue growth activity;
CC immunomodulatory activity; activin- or inhibin-related activities;
CC chemotactic or chemokinetic activities; haemostatic, thrombotic or
CC thrombolytic activities; receptor or ligand activities; or may be
CC involved in oncogenesis, cancer cell proliferation or metastasis.
CC Depending on their biological activities, polypeptides and nucleotides of
CC the invention are useful for preventing, treating or ameliorating medical
CC conditions, e.g., by protein or gene therapy. Such conditions include
CC cancers, haematopoietic disorders (e.g.,myeloid or lymphoid cell
CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
CC proliferative retinopathy, atherosclerosis, coronary heart disease,
CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
CC vascular growth. Polypeptides involved with tissue regeneration and
CC repair (or nucleic acids encoding them) may be used to promote wound
CC healing (e.g., of burns, incisions and ulcers), while those with
CC immunomodulatory activities may be used in the treatment of viral,
CC bacterial and fungal infections in addition to immune disorders.
CC Polypeptides with growth factor activity may be used in cell cultures to
CC promote cell growth. For example, such polypeptides may be used to
CC manipulate stem cells in culture to give rise to neuroepithelial cells
CC that can be used to augment or replace cells damaged by illness,
CC autoimmune disease or accidental damage. The polypeptides and nucleotides

```
CC   may also be used in the diagnosis of the above conditions, and in drug
CC   screening techniques. The present sequence represents a novel human
CC   polypeptide of the invention

PT   New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT   length, used to identify modulators, e.g. for inhibiting growth of
PT   cancer.
XX
PS   Disclosure; Page 121-123; 133pp; English.
XX
CC   The present sequence is truncated human tankyrase, a TRF1 (telomeric
CC   repeat binding factor-1) binding protein. This comprises 1-640 residues
CC   of human tankyrase. Tankyrase is involved in regulation of telomere
CC   length through TRF1 and may directly modulate the effect of TRF1.
CC   Recombinant tankyrase, or its fragments are used to identify specific
CC   modulators which are potential drugs for countering telomere shortening
CC   associated with aging (e.g. atrophy of skin, macular degeneration or
CC   atherosclerosis) or diseases like ataxia telangiectasia. They are also
CC   used to raise specific antibodies (used as immunoassay reagents and as
CC   modulators of tankyrase activity) and in rational drug design

PT   Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT   to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT   ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT   -ribosylation activity.
XX
PS   Disclosure; Page 138-140; 151pp; English.
XX
CC   The invention discloses a nuclear localisation signal (NLS)-telomeric
CC   protein tankyrase that comprises a NLS and at least a portion of a
CC   tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC   factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC   Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC   TRF1, which is a negative regulator of telomere length maintenance, and
CC   in so doing, counteracts its effect and play a role in lifecycle of a
CC   cell. The protein is useful for identifying agents that modulate the
CC   binding of TRF1 to its DNA binding site, for identifying agents that
CC   modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC   identifying the agents that modulate telomere length and for identifying
CC   agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC   the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC   would hinder telomere lengthening and so is useful in the treatment of
CC   cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC   telomere lengthening and so could be useful for extending the lifetime of
CC   the cell, especially self-renewing cells such as bone marrow cells,
CC   peripheral blood, T and B cells. Tankyrases are also useful for
CC   developing drugs that can counteract the telomere shortening associated
CC   with aging and certain diseases such as ataxia telangiectasia. The
CC   protein sequence presented is the truncated human tankyrase #1. Note:
CC   Residues 1-640 are the same as the wild-type human tankyrase sequence

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 7; Page 236-239; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   New complex between two interacting proteins in adipocyte cells, useful
PT   for identifying selected interacting domains that modulate protein
PT   interactions, or for preventing or treating metabolic disorders such as
PT   obesity or diabetes.
XX
PS   Claim 6; Page 276; 382pp; English.
XX
CC   The invention relates to a complex between two interacting proteins in
CC   adipocyte cells, given in the specification. The proteins are identified
CC   by selecting a bait protein from a known adipocyte marker and then
CC   performing a yeast 2-hybrid selection to isolate prey proteins encoded by
CC   members of an adipocyte cDNA library. The proteins are designated SID
CC   (RTM) (selected interacting domains) proteins. Also included are a
CC   polynucleotide encoding a polypeptide in the adipocyte cells, a
CC   recombinant host cell expressing at least one of the interacting
CC   polypeptides of the complex, selecting a modulating compound in adipocyte
CC   cells, a SID (RTM)) polypeptide comprising any of the 738 amino acid
CC   sequences given in the specification (including its fragment or variant),
CC   a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences
CC   given in the specification (including its fragment or variant), a vector
CC   comprising the SID (RTM) polynucleotide, a recombinant host cell
CC   comprising the vector, a protein chip comprising the polypeptides and a
CC   record comprising all or part of the data, listed in the specification.
CC   The complex, polypeptides, polynucleotides and compounds are useful for
CC   preventing or treating metabolic disorders such as obesity or diabetes.
CC   The polynucleotides are useful as probes or primers. The complex is
CC   particularly useful for identifying selected interacting domains (SID
CC   (RTM)) for screening drugs that modulate the protein interaction, thus
CC   exhibiting the therapeutic effect. The present sequence represents a SID
CC   (prey) protein of the invention

PT Diagnosing disorder characterized by expression of human cancer
PT associated antigen precursor, involves detecting interaction of an agent
PT with novel NA Group 1 nucleic acid molecule encoding the antigen
PT precursor.
XX
PS Example 1; Page 75-76; 87pp; English.
XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 6; Page 228-229; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT   New recombinant nucleic acid encoding a cell cycle protein, useful for
PT   diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS   Disclosure; Fig 16A-B; 90pp; English.
XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents tankyrase H isoform 1, TH-2, described in the
CC   disclosure of the invention

PT Diagnosing disorder characterized by expression of human cancer
PT associated antigen precursor, involves detecting interaction of an agent
PT with novel NA Group 1 nucleic acid molecule encoding the antigen
PT precursor.
XX
PS Example 1; Page 78-79; 87pp; English.
XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT New complex between two interacting proteins in adipocyte cells, useful
PT for identifying selected interacting domains that modulate protein
PT interactions, or for preventing or treating metabolic disorders such as
PT obesity or diabetes.
XX
PS Claim 6; Page 279; 382pp; English.
XX
CC The invention relates to a complex between two interacting proteins in
CC adipocyte cells, given in the specification. The proteins are identified
CC by selecting a bait protein from a known adipocyte marker and then
CC performing a yeast 2-hybrid selection to isolate prey proteins encoded by
CC members of an adipocyte cDNA library. The proteins are designated SID
CC (RTM) (selected interacting domains) proteins. Also included are a
CC polynucleotide encoding a polypeptide in the adipocyte cells, a
CC recombinant host cell expressing at least one of the interacting
CC polypeptides of the complex, selecting a modulating compound in adipocyte
CC cells, a SID (RTM)) polypeptide comprising any of the 738 amino acid
CC sequences given in the specification (including its fragment or variant),
CC a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences
CC given in the specification (including its fragment or variant), a vector
CC comprising the SID (RTM) polynucleotide, a recombinant host cell
CC comprising the vector, a protein chip comprising the polypeptides and a
CC record comprising all or part of the data, listed in the specification.
CC The complex, polypeptides, polynucleotides and compounds are useful for
CC preventing or treating metabolic disorders such as obesity or diabetes.
CC The polynucleotides are useful as probes or primers. The complex is
CC particularly useful for identifying selected interacting domains (SID
CC (RTM)) for screening drugs that modulate the protein interaction, thus
CC exhibiting the therapeutic effect. The present sequence represents a SID
CC (prey) protein of the invention

PT Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing
PT or preventing cell proliferation in cells, and for diagnosing, treating
PT or preventing cell cycle associated disorders such as cancer.
XX
PS Claim 13; Fig 2; 63pp; English.
XX
CC This sequence encodes the Tankyrase homologue isotype 2 (TaHo-2) protein

CC of the invention. The invention also relates to the TaHo-1 protein. The
CC TaHo proteins are useful for inducing or preventing cell proliferation in
CC cells, and in the study or treatment of conditions mediated by the cell
CC cycle proteins, such as to diagnose, treat or prevent cell cycle
CC associated disorders, preferably cancer. The TaHo coding sequences are
CC useful as hybridisation probes, in chromosome and gene mapping and in the
CC generation of anti-sense DNA and RNA. The coding sequences are also
CC useful for the preparation of TaHo, for generating either transgenic
CC animals or knock out animals which, in turn, are useful in a development
CC and screening of therapeutically useful agents, in gene therapy, as
CC vaccine, and for construction of hybridisation probes for mapping the
CC gene which encodes TaHo and for the genetic analysis of individuals with
CC genetic disorders. The TaHo proteins, and their coding sequences are
CC useful in screening assays

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Claim 13; Fig 2A-B; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This
CC sequence encodes the tankyrase H isoform 2, TaHo-2, isolated from clone
CC K23 which is described in the disclosure of the invention

PT   New insulin signaling protein SPANK, useful for reducing body mass,
PT   glucose intolerance or insulin resistance and for preventing or treating
PT   obesity-related and muscle-related diseases.
XX
PS   Claim 3; Fig 4; 65pp; English.
XX
CC   This sequence represents the human SPANK cDNA. The SPANK protein
CC   comprises 3 domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP
CC   (poly adenosine diphosphate-ribose polymerase) catalytic domain; and (c)
CC   an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein
CC   which can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC   aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC   perinuclear region of adipocytes. It is an effector in the insulin
CC   signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC   mass, reducing glucose intolerance or insulin resistance, for preventing
CC   or treating obesity-related diseases or disorders, such as obesity,
CC   cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC   atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC   dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC   also useful for preventing or treating muscle-related diseases or
CC   disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC   Antibodies immunospecific for SPANK are useful for detecting the presence
CC   of SPANK polypeptide in a biological sample

PT Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT the polypeptide useful for modulating or maintaining telomere length,
PT replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS Claim 1; Fig 4; 52pp; English.
XX
CC The present sequence is a version of the human tankyrase II coding
CC sequence. Its protein is thought to be involved in signal transduction in
CC the cell, and to have binding activity for other telomere-associated
CC proteins. It is possible that it plays a role in the regulation of
CC telomere length, thus affecting the replicative ability of the cell. The
CC protein is useful for ribosylating target proteins, for determining
CC tankyrase II binding activity in a sample, and for modulating telomere
CC length in a cell

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 2; Page 168-173; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Claim 6; Page 195-200; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

```

CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT   Diagnosing colon cancer in a subject comprises identifying colon cancer-
PT   associated polypeptides as antigens that elicit immune response in colon
PT   cancer.
XX
PS   Claim 1; Page 85-89; 122pp; English.
XX
CC   The invention relates to a method for diagnosing colon cancer in a
CC   subject which comprises identifying colon cancer-associated polypeptides
CC   as antigens that elicit immune response in colon cancer. The method is
CC   useful for diagnosing, determining onset, progression, or regression of
CC   colon cancer in a subject, or for selecting a course of treatment of a
CC   subject having or suspected of having colon cancer. The colon cancer-
CC   associated polypeptides are useful as markers for diagnosing colon
CC   cancer, and for following the course of treatment of colon cancer. The
CC   present sequence is human colon cancer-associated polypeptide gene

PT   New polynucleotides comprising sequences assembled from expressed
PT   sequence tags (ESTs), useful for treating cell-proliferative,
PT   neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or platelet
PT   or coagulation disorders.
XX
PS   Claim 1; SEQ ID NO 556; 1012pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated polynucleotide (I) comprising a
CC   nucleotide sequence selected from any of 948 sequences (ABZ11119-
CC   ABZ12066) or their mature protein coding portion, active domain coding
CC   protein or complementary sequences. The polynucleotides are useful for
CC   identifying expressed genes or for physical mapping of human genome. The
CC   encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight
CC   markers, as a food supplement, for generating antibodies, in medical
CC   imaging, screening and diagnostic assays and for treating cell-
CC   proliferative disorders (cancer), neurodegenerative diseases (Parkinson's
CC   or Alzheimer's disease), autoimmune diseases (multiple sclerosis,
CC   diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,
CC   platelet or coagulation disorders, wound, burns, incision, ulcers, liver
CC   or lung fibrosis, infections (bacterial, viral, fungal, parasitic),
CC   arthritis, etc. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 158-162; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT   New tankyrase homolog protein (THP) polynucleotide and polypeptide useful
PT   in gene therapy, diagnosis and treatment or prevention of unregulated
PT   cell growth, such as cancer or tumor cell growth.
XX
PS   Claim 1; Page 41-42; 60pp; English.
XX
CC   The present sequence is a DNA coding for human tankyrase homolog protein
CC   (THP). The THP polypeptides and polynucleotides of the invention are
CC   useful in gene therapy and for treating or preventing unregulated cell
CC   growth such as cancer or tumour (e.g. basal cell carcinoma). The nucleic
CC   acid molecules of the invention and their fragments are useful for
CC   restriction fragment length polymorphism (RFLP) associated with certain
CC   disorders, as well as for genetic mapping. Antisense oligonucleotides, or
CC   fragments of nucleic acid encoding THP are useful as diagnostic tools for
CC   probing the expression of Thp gene in various tissues. THP can be used as
CC   antigens for raising antibodies against them and in assays for
CC   identifying compounds that modulate their activity. They are used in the
CC   manufacture of a medicament directed towards cancers or tumours. THP are
CC   also useful for screening compounds in a variety of drugs screening
CC   techniques and as a research tool for identification, characterisation
CC   and purification of interacting, regulatory proteins

PT   inflammatory and autoimmune disorders.
XX
PS   Disclosure; Page 105-109; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing
PT   or preventing cell proliferation in cells, and for diagnosing, treating
PT   or preventing cell cycle associated disorders such as cancer.
XX
PS   Claim 13; Fig 1; 63pp; English.
XX
CC   This sequence encodes the Tankyrase homologue isotype 1 (TaHo-1) protein
CC   of the invention. The invention also relates to the TaHo-2 protein. The
CC   TaHo proteins are useful for inducing or preventing cell proliferation in
CC   cells, and in the study or treatment of conditions mediated by the cell
CC   cycle proteins, such as to diagnose, treat or prevent cell cycle
CC   associated disorders, preferably cancer. The TaHo coding sequences are
CC   useful as hybridisation probes, in chromosome and gene mapping and in the
CC   generation of anti-sense DNA and RNA. The coding sequences are also
CC   useful for the preparation of TaHo, for generating either transgenic
CC   animals or knock out animals which, in turn, are useful in a development
CC   and screening of therapeutically useful agents, in gene therapy, as
CC   vaccine, and for construction of hybridisation probes for mapping the
CC   gene which encodes TaHo and for the genetic analysis of individuals with
CC   genetic disorders. The TaHo proteins, and their coding sequences are
CC   useful in screening assays

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Claim 13; Fig 1A-B; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This
CC sequence encodes the tankyrase H isoform 1, TaHo-1, isolated from clone
CC TH-1 which is described in the disclosure of the invention

```

```
CC   The present sequence is a version of the human tankyrase II coding
CC   sequence. Its protein is thought to be involved in signal transduction in
CC   the cell, and to have binding activity for other telomere-associated
CC   proteins. It is possible that it plays a role in the regulation of
CC   telomere length, thus affecting the replicative ability of the cell. The
CC   protein is useful for ribosylating target proteins, for determining
CC   tankyrase II binding activity in a sample, and for modulating telomere
CC   length in a cell

PT   New candidate effector for the Grb7 family of signaling proteins, and
PT   specific antibody, useful for detection and treatment of cancer.
XX
PS   Claim 4; Fig 1; 24pp; English.
XX
CC   This is the nucleotide sequence of an isolated polynucleotide molecule
CC   encoding a candidate effector protein, termed 2.2412 (see AAY05734), for
CC   the Grb7 family of signalling proteins. A partial clone was isolated from
CC   a human liver cDNA library using a yeast two-hybrid system assay with
CC   Grb14 as bait. This clone was used to screen a human placental cDNA
CC   library that provided the C-terminal end of the 2.2412 sequence. A 5'
CC   sequence for the clone, including the initiation codon, was not
CC   identified. Analysis of the sequence revealed significant homology to a
CC   large number of proteins containing ankyrin-like repeats. The gene was
CC   localised to between chromosome 10q23.2 and proximal 10q23.32. Deletions
CC   in the 10q22-25 region have been detected in human breast, prostate,
CC   renal, small cell lung and endometrial carcinomas, glioblastoma
CC   multiforme, melanoma and meningiomas. Detection of the protein encoded by
CC   the 2.2412 cDNA in a sample should provide a useful tumour marker and/or
CC   prognostic indicator for certain human cancers, in particular breast
CC   cancer and prostate cancer. Antagonism of the interaction between Grb7
CC   family members and the encoded protein should provide a novel treatment
CC   strategy for human diseases exhibiting aberrant receptor tyrosine kinase
CC   signalling, such as cancer. Oligonucleotide probes can be used in methods
CC   of detecting the presence of 2.2412 mRNA in a sample

PT   Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT   the polypeptide useful for modulating or maintaining telomere length,
PT   replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS   Claim 1; Fig 2; 52pp; English.
XX
CC   The present sequence is a version of the human tankyrase II coding
CC   sequence. Its protein is thought to be involved in signal transduction in
CC   the cell, and to have binding activity for other telomere-associated
CC   proteins. It is possible that it plays a role in the regulation of
CC   telomere length, thus affecting the replicative ability of the cell. The
CC   protein is useful for ribosylating target proteins, for determining
CC   tankyrase II binding activity in a sample, and for modulating telomere
CC   length in a cell

XX
PT Diagnosing disorder characterized by expression of human cancer
PT associated antigen precursor, involves detecting interaction of an agent
PT with novel NA Group 1 nucleic acid molecule encoding the antigen
PT precursor.
XX
PS Example 8; Page 82-84; 87pp; English.
XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PS Example 1; Page 152-153; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 146-150; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New insulin signaling protein SPANK, useful for reducing body mass,
PT glucose intolerance or insulin resistance and for preventing or treating
PT obesity-related and muscle-related diseases.
XX
PS Claim 3; Fig 5A; 65pp; English.
XX
CC This sequence represents the mouse SPANK cDNA. The SPANK protein
CC comprises 3 domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP
CC (poly adenosine diphosphate-ribose polymerase) catalytic domain; and (c)
CC an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein
CC which can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC perinuclear region of adipocytes. It is an effector in the insulin
CC signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC mass, reducing glucose intolerance or insulin resistance, for preventing
CC or treating obesity-related diseases or disorders, such as obesity,
CC cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC also useful for preventing or treating muscle-related diseases or
CC disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC Antibodies immunospecific for SPANK are useful for detecting the presence
CC of SPANK polypeptide in a biological sample

PT   New tankyrase2 polypeptides, useful by treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 1; Page 113-118; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT   length, used to identify modulators, e.g. for inhibiting growth of
PT   cancer.
XX
PS   Claim 5; Page 111-112; 133pp; English.
XX
CC   The present cDNA sequence encodes human tankyrase, a TRF1 binding
CC   protein. This cDNA was isolated from a human testis library. Tankyrase is
CC   involved in regulation of telomere length through TRF1 and may directly
CC   modulate the effect of TRF1. This gene is used to produce recombinant
CC   tankyrase, or its fragments, and these are used to identify specific
CC   modulators which are potential drugs to control telomere length
CC   homeostasis for countering telomere shortening associated with aging
CC   (e.g. atrophy of skin, macular degeneration or atherosclerosis) or
CC   diseases such as ataxia telangiectasia. This can also be used to identify
CC   homologous genes and in gene therapy (including antisense or ribozyme
CC   expression). Transgenic animals having at least one disrupted endogenous
CC   allele for tankyrase are used in drug screening

PS Claim 1; Fig 6; 52pp; English.
XX
CC The present sequence is a version of the human tankyrase I coding
CC sequence. The invention relates to the isolation of the protein and
CC coding sequences of human tankyrase II. This protein is thought to be
CC involved in signal transduction in the cell, and to have binding activity
CC for other telomere-associated proteins. It is possible that it plays a
CC role in the regulation of telomere length, thus affecting the replicative
CC ability of the cell. The protein is useful for ribosylating target
CC proteins, for determining tankyrase II binding activity in a sample, and
CC for modulating telomere length in a cell

PT   Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT   to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT   ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT   -ribosylation activity.
XX
PS   Disclosure; Page 127-129; 151pp; English.
XX
CC   The invention discloses a nuclear localisation signal (NLS)-telomeric
CC   protein tankyrase that comprises a NLS and at least a portion of a
CC   tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC   factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC   Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC   TRF1, which is a negative regulator of telomere length maintenance, and
CC   in so doing, counteracts its effect and play a role in lifecycle of a
CC   cell. The protein is useful for identifying agents that modulate the
CC   binding of TRF1 to its DNA binding site, for identifying agents that
CC   modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC   identifying the agents that modulate telomere length and for identifying
CC   agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC   the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC   would hinder telomere lengthening and so is useful in the treatment of
CC   cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC   telomere lengthening and so could be useful for extending the lifetime of
CC   the cell, especially self-renewing cells such as bone marrow cells,
CC   peripheral blood, T and B cells. Tankyrases are also useful for
CC   developing drugs that can counteract the telomere shortening associated
CC   with aging and certain diseases such as ataxia telangiectasia. The
CC   sequence presented is the human tankyrase cDNA

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 154-156; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT   New combination comprising cDNAs that are differentially expressed in
PT   prostate cancer, useful for diagnosing, treating or monitoring the
PT   progression of treatment of prostate cancer.
XX
PS   Claim 5; SEQ ID NO 342; 42pp; English.
XX
CC   The invention relates to a combination comprising a number of cDNAs
CC   expressed in prostate cancer. The invention also relates to a method for
CC   detecting differential expression of one or more cDNAs in a sample
CC   containing nucleic acids by hybridising a substrate with the nucleic
CC   acids, thus forming one or more hybridisation complexes, detecting
CC   hybridisation complex formation and comparing the complexes formed with
CC   standard complexes, where differences between the standard and the sample
CC   complex formation indicate differential expression of cDNAs in the
CC   sample. The differential expression is diagnostic of prostate cancer. The
CC   invention also relates to proteins and antibodies related to the cDNAs.
CC   The combination is useful for diagnosing, treating or monitoring the
CC   progression of treatment of prostate cancer. The antibodies are useful
CC   for detecting prostate cancer. This sequence represents a human prostate
CC   cancer cDNA of the invention.

PT New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT length, used to identify modulators, e.g. for inhibiting growth of
PT cancer.
XX
PS Disclosure; Page 119-120; 133pp; English.
XX
CC The present sequence encodes a truncated human tankyrase, a TRF1 binding
CC protein. This DNA comprises the coding sequence for amino acid residues 1
CC -640 of human tankyrase. Tankyrase is involved in regulation of telomere
CC length through TRF1 and may directly modulate the effect of TRF1. This
CC gene is used to produce recombinant tankyrase, or its fragments, and
CC these are used to identify specific modulators which are potential drugs
CC to control telomere length homeostasis for countering telomere shortening
CC associated with aging (e.g. atrophy of skin, macular degeneration or
CC atherosclerosis) or diseases such as ataxia telangiectasia. This can also
CC be used to identify homologous genes and in gene therapy (including
CC antisense or ribozyme expression). Transgenic animals having at least one
CC disrupted endogenous allele for tankyrase are used in drug screening

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Disclosure; Page 134-138; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC sequence presented is the truncated human tankyrase #1 cDNA. Note:
CC Nucleotides 1-1925 are the same as the wild-type human tankyrase sequence

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Disclosure; Page 141-145; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC sequence presented is the truncated human tankyrase #2 cDNA. Note:
CC Nucleotides 1-2648 are the same as the wild-type human tankyrase sequence

PT Human proteins and DNA encoding sequences useful for preventing, treating

PT or ameliorating a medical condition in a mammalian subject e.g. arthritis
PT and cancer.
XX
PS Claim 1; Page 453; 1963pp; English.
XX
CC Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The
CC invention also relates to vectors and recombinant host cells comprising a
CC nucleotide of the invention, methods of producing the novel polypeptides,
CC antibodies against the polypeptides, methods of detecting the nucleotides
CC or polypeptides in a sample, and methods of identifying compounds which
CC bind to polypeptides of the invention. Although novel, many of the
CC polypeptides of the invention have homology to known proteins, thereby
CC giving an insight into their probable biological activities, and hence
CC potential therapeutic applications. The polypeptides of the invention may
CC have various activities, including cytokine, cell proliferation or cell
CC differentiation activities; stem cell growth factor activity;
CC haematopoiesis regulatory activity; tissue growth activity;
CC immunomodulatory activity; activin- or inhibin-related activities;
CC chemotactic or chemokinetic activities; haemostatic, thrombotic or
CC thrombolytic activities; receptor or ligand activities; or may be
CC involved in oncogenesis, cancer cell proliferation or metastasis.
CC Depending on their biological activities, polypeptides and nucleotides of
CC the invention are useful for preventing, treating or ameliorating medical
CC conditions, e.g., by protein or gene therapy. Such conditions include
CC cancers, haematopoietic disorders (e.g.,myeloid or lymphoid cell
CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
CC proliferative retinopathy, atherosclerosis, coronary heart disease,
CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
CC vascular growth. Polypeptides involved with tissue regeneration and
CC repair (or nucleic acids encoding them) may be used to promote wound
CC healing (e.g., of burns, incisions and ulcers), while those with
CC immunomodulatory activities may be used in the treatment of viral,
CC bacterial and fungal infections in addition to immune disorders.
CC Polypeptides with growth factor activity may be used in cell cultures to
CC promote cell growth. For example, such polypeptides may be used to
CC manipulate stem cells in culture to give rise to neuroepithelial cells
CC that can be used to augment or replace cells damaged by illness,
CC autoimmune disease or accidental damage. The polypeptides and nucleotides
CC may also be used in the diagnosis of the above conditions, and in drug
CC screening techniques. The present sequence represents a cDNA encoding a
CC novel human polypeptide of the invention

PT   New transgenic fly, containing DNA encoding an Abeta portion of human
PT   APP, useful for identifying agents which modulate the APP pathway and
PT   which can be used to treat Alzheimer's disease.
XX
PS   Example 4; Page 112-113; 129pp; English.
XX
CC   The invention relates to a transgenic fly whose genome comprises DNA
CC   encoding a polypeptide having the Abeta portion of human amyloid
CC   precursor protein (APP), fused to a signal sequence. The DNA sequence
CC   encodes a 123 (Abeta40) or 129 (Abeta42) amino acid sequence, given in
CC   the specification. The DNA sequence is operably linked to a tissue-
CC   specific expression control sequence. Expression of the sequence gives
CC   the fly an altered phenotype. The purpose of the invention is for
CC   identifying agents that inhibit or promote the expression and/or function
CC   of genes or encoded polypeptides which modify the APP pathway. The agent
CC   is a compound, triple helix DNA, antisense oligonucleotide, double
CC   stranded RNA molecule, ribozyme, or particularly an antibody. It is used
CC   to treat conditions such as Alzheimer's disease. The agent can be used as
CC   an APP pathway modulator or in gene therapy. This polynucleotide sequence
CC   represents the DNA of the APP related human homologue hCP33787

PT   Diagnosing disorder characterized by expression of human cancer
PT   associated antigen precursor, involves detecting interaction of an agent
PT   with novel NA Group 1 nucleic acid molecule encoding the antigen
PT   precursor.
XX
PS   Example 1; Page 74-75; 87pp; English.
XX
CC   The present sequence is given in a specification relating to nucleic
CC   acids and encoded polypeptides which are cancer associated antigens
CC   expressed in patients afflicted with breast cancer and/or T cell
CC   leukaemia. A disorder characterised by expression of human cancer
CC   associated antigen may be diagnosed by contacting a biological sample
CC   with an agent that specifically binds to the nucleic acid that encodes
CC   the antigen, complexed with human leukocyte antigen molecule, and
CC   determining the interaction between the agent and the nucleic acid.
CC   Cancer associated antigens, the nucleotides encoding them, antibodies
CC   against them and the pharmaceutical compositions comprising them are
CC   useful for diagnosing, monitoring and treating the diseases characterised
CC   by the expression of one or more cancer associated antigens

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 7; Page 232-236; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT New complex between two interacting proteins in adipocyte cells, useful
PT for identifying selected interacting domains that modulate protein
PT interactions, or for preventing or treating metabolic disorders such as
PT obesity or diabetes.
XX
PS Claim 7; Page 276; 382pp; English.
XX
CC The invention relates to a complex between two interacting proteins in
CC adipocyte cells, given in the specification. The proteins are identified
CC by selecting a bait protein from a known adipocyte marker and then
CC performing a yeast 2-hybrid selection to isolate prey proteins encoded by
CC members of an adipocyte cDNA library. The proteins are designated SID
CC (RTM) (selected interacting domains) proteins. Also included are a
CC polynucleotide encoding a polypeptide in the adipocyte cells, a
CC recombinant host cell expressing at least one of the interacting
CC polypeptides of the complex, selecting a modulating compound in adipocyte
CC cells, a SID (RTM)) polypeptide comprising any of the 738 amino acid
CC sequences given in the specification (including its fragment or variant),
CC a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences
CC given in the specification (including its fragment or variant), a vector
CC comprising the SID (RTM) polynucleotide, a recombinant host cell
CC comprising the vector, a protein chip comprising the polypeptides and a
CC record comprising all or part of the data, listed in the specification.
CC The complex, polypeptides, polynucleotides and compounds are useful for
CC preventing or treating metabolic disorders such as obesity or diabetes.
CC The polynucleotides are useful as probes or primers. The complex is
CC particularly useful for identifying selected interacting domains (SID
CC (RTM)) for screening drugs that modulate the protein interaction, thus
CC exhibiting the therapeutic effect. The present sequence encodes a SID
CC (prey) protein of the invention

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 6; Page 226-228; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT   length cDNAs defined in the specification, and for the detection and/or
PT   diagnosis of the abnormality of the proteins encoded by the full-length
PT   cDNAs.
```

```
XX
PS   Claim 8; SEQ ID NO 15732; 2537pp + Sequence Listing; English.
XX
CC   The present invention describes primer sets for synthesising 5602 full-
CC   length cDNAs defined in the specification. Where a primer set comprises:
CC   (a) an oligo-dT primer and an oligonucleotide complementary to the
CC   complementary strand of a polynucleotide which comprises one of the 5602
CC   nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in the
CC   specification. The primer sets can be used in antisense therapy and in
CC   gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC   represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC   oligonucleotides, all of which are used in the exemplification of the
CC   present invention

XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
```

CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 2; Page 210-215; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT   New combination comprising cDNAs that are differentially expressed in
PT   prostate cancer, useful for diagnosing, treating or monitoring the
PT   progression of treatment of prostate cancer.
XX
PS   Claim 1; SEQ ID NO 341; 42pp; English.
XX
CC   The invention relates to a combination comprising a number of cDNAs
CC   expressed in prostate cancer. The invention also relates to a method for
CC   detecting differential expression of one or more cDNAs in a sample
CC   containing nucleic acids by hybridising a substrate with the nucleic
CC   acids, thus forming one or more hybridisation complexes, detecting
CC   hybridisation complex formation and comparing the complexes formed with
CC   standard complexes, where differences between the standard and the sample
CC   complex formation indicate differential expression of cDNAs in the
CC   sample. The differential expression is diagnostic of prostate cancer. The
CC   invention also relates to proteins and antibodies related to the cDNAs.
CC   The combination is useful for diagnosing, treating or monitoring the
CC   progression of treatment of prostate cancer. The antibodies are useful
CC   for detecting prostate cancer. This sequence represents a human prostate
CC   cancer cDNA of the invention.

XX
CC AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
CC which represent the human ORFX open reading frames 1 to 3161. The ORFX
CC sequences have activities such as: cytostatic; hepatotropic; vulnerary;
CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
CC anticonvulsant; antiarthritic; immunosuppressant; immunostimulant;
CC cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive;
CC dermatological; immunosuppressive; antiinflammatory; antibacterial;
CC antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The
CC sequences can be used for determining the presence of or predisposition
CC to, or preventing or treating pathological conditions associated with an
CC ORFX-associated disorder. The nucleic acids can be used to express ORFX
CC proteins in gene therapy vectors. The proteins and nucleic acids may be
CC used to treat cancers, proliferative disorders, neurodegenerative
CC disorders, osteoarthritis, graft vs host disease, cardiovascular disease,
CC diabetes mellitus, hypertension, hypothyroidism, cholesterol ester
CC storage, systemic lupus erythematosus, severe combined immunodeficiency
CC (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
CC disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and
CC cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to
CC enhance coagulation; to inhibit thrombosis; and as a contraceptive

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 1; SEQ ID NO 5066; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

RESULT 10
US-09-972-115A-4
; Sequence 4, Application US/09972115A
; Publication No. US20030032769A1
; GENERAL INFORMATION:
;  APPLICANT: Geron Corporation
;  APPLICANT:  Gregg, Morin B.
;  APPLICANT:  Walter, Funk D.
;  APPLICANT:  Mieczyslaw, Piatyszek A.
;  TITLE OF INVENTION: A Second Mammalian Telomerase
;  FILE REFERENCE: 080/003C
;  CURRENT APPLICATION NUMBER: US/09/972,115A
;  CURRENT FILING DATE:  2001-10-05
;  PRIOR APPLICATION NUMBER: US 60/128,577
;  PRIOR FILING DATE: 2000-04-10
;  PRIOR APPLICATION NUMBER: US 60/129,123
;  PRIOR FILING DATE: 1999-04-13
;  NUMBER OF SEQ ID NOS: 64
;  SOFTWARE: PatentIn version 3.1
; SEQ ID NO 4
;   LENGTH: 1267
;   TYPE: PRT
;   ORGANISM: Homo sapiens
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (1)..(1)
;   OTHER INFORMATION: The 'Xaa' at location 1 stands for Thr, Ala, Pro, or Ser.
;   NAME/KEY: misc_feature
;   LOCATION: (42)..(42)
;   OTHER INFORMATION: The 'Xaa' at location 42 stands for Lys, Arg, Thr, or Met.
;   NAME/KEY: misc_feature
;   LOCATION: (98)..(98)
;   OTHER INFORMATION: The 'Xaa' at location 98 stands for Lys, Arg, Thr, or Met.
;   NAME/KEY: misc_feature
;   LOCATION: (110)..(110)
;   OTHER INFORMATION: The 'Xaa' at location 110 stands for Thr, Ala, Pro, or Ser.
;   NAME/KEY: misc_feature
;   LOCATION: (114)..(114)
;   OTHER INFORMATION: The 'Xaa' at location 114 stands for Asn, Ser, Thr, or Ile.
;   NAME/KEY: misc_feature
;   LOCATION: (126)..(126)
;   OTHER INFORMATION: The 'Xaa' at location 126 stands for Lys, or Asn.
;   NAME/KEY: misc_feature
;   LOCATION: (139)..(139)
;   OTHER INFORMATION: The 'Xaa' at location 139 stands for Ile, Val, Leu, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (144)..(144)
;   OTHER INFORMATION: The 'Xaa' at location 144 stands for Thr.
;   NAME/KEY: misc_feature
;   LOCATION: (153)..(153)
;   OTHER INFORMATION: The 'Xaa' at location 153 stands for Thr.
;   NAME/KEY: misc_feature
;   LOCATION: (166)..(166)
;   OTHER INFORMATION: The 'Xaa' at location 166 stands for Ser, Gly, Arg, or Cys.
;   NAME/KEY: misc_feature
;   LOCATION: (173)..(173)
;   OTHER INFORMATION: The 'Xaa' at location 173 stands for Ile, Val, Leu, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (174)..(174)
;   OTHER INFORMATION: The 'Xaa' at location 174 stands for Glu, or Lys.
;   NAME/KEY: misc_feature
;   LOCATION: (183)..(183)
;   OTHER INFORMATION: The 'Xaa' at location 183 stands for Val.
;   NAME/KEY: misc_feature
;   LOCATION: (185)..(185)
;   OTHER INFORMATION: The 'Xaa' at location 185 stands for Thr, Ala, Pro, or Ser.
;   NAME/KEY: misc_feature
;   LOCATION: (188)..(188)
;   OTHER INFORMATION: The 'Xaa' at location 188 stands for Asn, Asp, His, or Tyr.
;   NAME/KEY: misc_feature
;   LOCATION: (202)..(202)
;   OTHER INFORMATION: The 'Xaa' at location 202 stands for His, or Pro.
;   NAME/KEY: misc_feature
;   LOCATION: (204)..(204)
;   OTHER INFORMATION: The 'Xaa' at location 204 stands for Glu, or Lys.
;   NAME/KEY: misc_feature
```

; LOCATION: (205)..(205)
; OTHER INFORMATION: The 'Xaa' at location 205 stands for Asn, Ser, Thr, or Ile.
; NAME/KEY: misc_feature
; LOCATION: (207)..(207)
; OTHER INFORMATION: The 'Xaa' at location 207 stands for Asn, Asp, His, or Tyr.
; NAME/KEY: misc_feature
; LOCATION: (211)..(211)
; OTHER INFORMATION: The 'Xaa' at location 211 stands for Gln, Arg, Pro, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (213)..(213)
; OTHER INFORMATION: The 'Xaa' at location 213 stands for Ser, Gly, Arg, or Cys.
; NAME/KEY: misc_feature
; LOCATION: (215)..(215)
; OTHER INFORMATION: The 'Xaa' at location 215 stands for Lys, Asn, Glu, Asp, Gln, His
; OTHER INFORMATION: , a stop codon, or Tyr.
; NAME/KEY: misc_feature
; LOCATION: (227)..(227)
; OTHER INFORMATION: The 'Xaa' at location 227 stands for His, Arg, Pro, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (228)..(228)
; OTHER INFORMATION: The 'Xaa' at location 228 stands for Asn, Asp, His, or Tyr.
; NAME/KEY: misc_feature
; LOCATION: (237)..(237)
; OTHER INFORMATION: The 'Xaa' at location 237 stands for Glu, or Asp.
; NAME/KEY: misc_feature
; LOCATION: (238)..(238)
; OTHER INFORMATION: The 'Xaa' at location 238 stands for Asn, Ser, Thr, Ile, Asp, Gly
; OTHER INFORMATION: , Ala, Val, His, Arg, Pro, Leu, Tyr, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (667)..(667)
; OTHER INFORMATION: The 'Xaa' at location 667 stands for Tyr, Cys, Ser, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (725)..(725)
; OTHER INFORMATION: The 'Xaa' at location 725 stands for Lys, or Asn.
; NAME/KEY: misc_feature
; LOCATION: (727)..(727)
; OTHER INFORMATION: The 'Xaa' at location 727 stands for His, Arg, Pro, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (735)..(735)
; OTHER INFORMATION: The 'Xaa' at location 735 stands for Glu, or Asp.
; NAME/KEY: misc_feature
; LOCATION: (741)..(741)
; OTHER INFORMATION: The 'Xaa' at location 741 stands for Met, Val, or Leu.
; NAME/KEY: misc_feature
; LOCATION: (763)..(763)
; OTHER INFORMATION: The 'Xaa' at location 763 stands for Leu, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (764)..(764)
; OTHER INFORMATION: The 'Xaa' at location 764 stands for Tyr, Cys, Ser, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (787)..(787)
; OTHER INFORMATION: The 'Xaa' at location 787 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (788)..(788)
; OTHER INFORMATION: The 'Xaa' at location 788 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (789)..(789)
; OTHER INFORMATION: The 'Xaa' at location 789 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (790)..(790)
; OTHER INFORMATION: The 'Xaa' at location 790 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (791)..(791)
; OTHER INFORMATION: The 'Xaa' at location 791 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (792)..(792)
; OTHER INFORMATION: The 'Xaa' at location 792 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (793)..(793)
; OTHER INFORMATION: The 'Xaa' at location 793 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (794)..(794)
; OTHER INFORMATION: The 'Xaa' at location 794 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
; NAME/KEY: misc_feature
; LOCATION: (795)..(795)
; OTHER INFORMATION: The 'Xaa' at location 795 stands for Lys, Asn, Arg, Ser, Thr, Ile
; OTHER INFORMATION: , Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
; OTHER INFORMATION: Tyr, Trp, Cys, or Phe.

RESULT 11
US-09-841-835-2
; Sequence 2, Application US/09841835
; Patent No. US20020076795A1
;  GENERAL INFORMATION:
;    APPLICANT:  de Lange, Titia
;    APPLICANT:  Smith, Susan
;    TITLE OF INVENTION:  A PROTEIN THAT BINDS TO TRF1 AND METHODS
;    TITLE OF INVENTION:  OF USE THEREOF
;    NUMBER OF SEQUENCES:  12
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  Klauber & Jackson
;      STREET:  411 Hackensack Avenue, 4th Floor
;      CITY:  Hackensack
;      STATE:  New Jersey
;      COUNTRY:  USA
;      ZIP:  07601
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.30
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/09/841,835
;      FILING DATE:
;      CLASSIFICATION:
;    PRIOR APPLICATION DATA:
;      APPLICATION NUMBER:  09/196,387
;      FILING DATE:
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Jackson Esq., David A.
;      REGISTRATION NUMBER:  26,742
;      REFERENCE/DOCKET NUMBER:  600-1-230 CIP1
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  201-487-5800
;      TELEFAX:  201-343-1684
;      TELEX:  133521
;  INFORMATION FOR SEQ ID NO:  2:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  1327 amino acids
;      TYPE:  amino acid
;      STRANDEDNESS:  single
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  protein
;    HYPOTHETICAL:  NO

CC   -!- FUNCTION: May regulate vesicle trafficking and modulate the
CC       subcellular distribution of SLC2A4/GLUT4-vesicles. Has PARP
CC       activity and can modify TRF1, and thereby contribute to the
CC       regulation of telomere length.
CC   -!- CATALYTIC ACTIVITY: NAD(+) + {ADP-D-ribosyl}(N)-acceptor =
CC       nicotinamide + {ADP-D-ribosyl}(N+1)-acceptor.
CC   -!- SUBUNIT: Oligomerizes and associates with TNKS. Interacts with the
CC       cytoplasmic domain of LNPEP/Otase in SLC2A4/GLUT4-vesicles. Binds
CC       to the N-terminus of Grb14 and TRF1 with its ankyrin repeat
CC       region.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic, associated with the Golgi and
CC       with juxtanuclear SLC2A4/GLUT4-vesicles. Also found around the
CC       pericentriolar matrix of mitotic centromeres. During interphase, a
CC       small fraction of TNKS2 is found in the nucleus, associated with
CC       TRF1.
CC   -!- TISSUE SPECIFICITY: Highly expressed in placenta, skeletal muscle,
CC       liver, brain, kidney, heart, thymus, spinal cord, lung, peripheral
CC       blood leukocytes, pancreas, lymph nodes, spleen, prostate, testis,
CC       ovary, small intestine, colon, mammary gland, breast and breast
CC       carcinoma, and in common-type meningioma. Highly expressed in
CC       fetal liver, heart and brain.
CC   -!- PTM: ADP-ribosylated (-auto).
CC   -!- SIMILARITY: Belongs to the PARP family.
CC   -!- SIMILARITY: Contains 15 ANK repeats.
CC   -!- SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.

RT   "AnkyrinG. A new ankyrin gene with neural-specific isoforms localized
RT   at the axonal initial segment and node of Ranvier.";
RL   J. Biol. Chem. 270:2352-2359(1995).
CC   -!- FUNCTION: Membrane-cytoskeleton linker. The neural-specific
CC       isoforms may participate in the maintenance/targeting of ion
CC       channels and cell adhesion molecules at the nodes of Ranvier and
CC       axonal initial segments.
CC   -!- SUBUNIT: Neural-specific isoforms may be a constituent of a
CC       neurofascin/NRCAM/ankyrin G complex.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=1;
CC         Comment=A number of isoforms are produced;
CC       Name=1; Synonyms=480-kDa isoform;
CC         IsoId=Q12955-1; Sequence=Displayed;
CC   -!- TISSUE SPECIFICITY: Expressed in brain and other tissues. Isoform
```

```
CC       1 is neural-specific.
CC   -!- SIMILARITY: Contains 23 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.

CC   -!- FUNCTION: Attach integral membrane proteins to cytoskeletal
CC       elements; bind to the erythrocyte membrane protein band 4.2, to
CC       Na-K ATPase, to the lymphocyte membrane protein GP85, and to the
CC       cytoskeletal proteins fodrin, tubulin, vimentin and desmin.
CC       Erythrocyte ankyrins also link spectrin (beta chain) to the
CC       cytoplasmic domain of the erythrocytes anion exchange protein;
CC       they retain most or all of these binding functions.
CC   -!- SUBCELLULAR LOCATION: CYTOPLASMIC SURFACE OF ERYTHROCYTIC PLASMA
CC       MEMBRANE.
CC   -!- ALTERNATIVE PRODUCTS:

CC   -!- FUNCTION: Attach integral membrane proteins to cytoskeletal
CC       elements; bind to the erythrocyte membrane protein band 4.2, to
CC       Na-K ATPase, to the lymphocyte membrane protein GP85, and to the
CC       cytoskeletal proteins fodrin, tubulin, vimentin and desmin.
CC       Erythrocyte ankyrins also link spectrin (beta chain) to the
CC       cytoplasmic domain of the erythrocytes anion exchange protein;
CC       they retain most or all of these binding functions.
CC   -!- SUBCELLULAR LOCATION: CYTOPLASMIC SURFACE OF ERYTHROCYTIC
CC       PLASMA MEMBRANE.
CC   -!- PTM: Regulated by phosphorylation (By similarity).
CC   -!- PTM: Acylated by palmitic acid group(s) (By similarity).
CC   -!- SIMILARITY: Contains 23 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.
CC   ---------------------------------------------------------------------

CC   -!- FUNCTION: Binds to high-affinity receptors that are localized in
CC       the presynaptic plasma membrane of the nerve terminal. Binding of
CC       toxin results in calcium influx into nerve terminals, activation
CC       of synaptic vesicle exocytosis, and ATP depletion.
CC   -!- PTM: Alpha-latrotoxin may be processed at its C-terminus.
CC   -!- SIMILARITY: Contains 21 ANK repeats.

CC   -!- FUNCTION: Calcium/calmodulin-dependent serine/threonine kinase
CC       which acts as a positive regulator of apoptosis.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
CC   -!- COFACTOR: Magnesium.
CC   -!- ENZYME REGULATION: Negatively regulated by autophosphorylation on
CC       Ser-308.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic. Colocalizes with the actin
CC       filament system.
CC   -!- INDUCTION: Up-regulated following treatment with interferon-gamma.
CC   -!- SIMILARITY: Belongs to the Ser/Thr family of protein kinases. DAP
CC       kinase subfamily.
CC   -!- SIMILARITY: Contains 10 ANK repeats.
CC   -!- CAUTION: Ref.1 sequence differs from that shown due to
CC       frameshifts in positions 466 and 477.

CC   -!- FUNCTION: Calcium/calmodulin-dependent serine/threonine kinase.
CC       Isoform 1 is a negative regulator of apoptosis in direct contrast
CC       to its human homolog. Isoform 2 has no effect on apoptosis and its
CC       function is unknown.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
CC   -!- COFACTOR: Magnesium.
CC   -!- ENZYME REGULATION: Negatively regulated by autophosphorylation on
CC       Ser-308 (By similarity).
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=2;
CC       Name=1; Synonyms=Beta;
CC         IsoId=Q80YE7-1; Sequence=Displayed;
CC       Name=2; Synonyms=Alpha;
CC         IsoId=Q80YE7-2; Sequence=VSP_050629;
CC   -!- TISSUE SPECIFICITY: High levels in bladder, uterus, vas deferens,
CC       lung, liver and kidney.
CC   -!- SIMILARITY: Belongs to the Ser/Thr family of protein kinases. DAP
CC       kinase subfamily.
CC   -!- SIMILARITY: Contains 10 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.

CC   -!- FUNCTION: Not known. Its expression induces growth inhibition and
CC       chromatin condensation.
CC   -!- INDUCTION: By all-trans retinoic acid (ATRA).
CC   -!- SIMILARITY: Contains 12 ANK repeats.
CC   -!- SIMILARITY: Contains 1 SOCS box domain.

CC   -!- FUNCTION: Histone methyltransferase. Methylates Lys-9 of histone
CC       H3 (in vitro). H3 Lys-9 methylation represents a specific tag for
CC       epigenetic transcriptional repression by recruiting HP1 proteins
CC       to methylated histones. Probably targeted to histone H3 by
CC       different DNA-binding proteins like E2F6, MGA, MAX and/or DP1.
CC       During G0 phase, it probably contributes to silencing of MYC- and
CC       E2F-responsive genes, suggesting a role in G0/G1 transition in
CC       cell cycle.
CC   -!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + histone L-lysine =
CC       S-adenosyl-L-homocysteine + histone N(6)-methyl-L-lysine.
CC   -!- SUBUNIT: Part of the E2F6.com-1 complex in G0 phase composed of
CC       E2F6, MGA, MAX, TFDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR,
CC       L3MBTL2 and YAF2.
CC   -!- SUBCELLULAR LOCATION: Nuclear; associates with euchromatic
CC       regions.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=3;
CC         Comment=Experimental confirmation may be lacking for some
CC         isoforms;
CC       Name=1;
CC         IsoId=Q9H9B1-1; Sequence=Displayed;
CC       Name=2;
CC         IsoId=Q9H9B1-2; Sequence=VSP_002222, VSP_002223;
CC       Name=3;
CC         IsoId=Q9H9B1-3; Sequence=VSP_002224, VSP_002225;
CC   -!- TISSUE SPECIFICITY: Widely expressed.
CC   -!- SIMILARITY: Belongs to the histone-lysine methyltransferase
CC       family.
CC   -!- SIMILARITY: Contains 8 ANK repeats.
CC   -!- SIMILARITY: Contains 1 pre-SET domain.
CC   -!- SIMILARITY: Contains 1 SET domain.

```
CC   -!- FUNCTION: Inhibits protein phosphatase 1 activity toward
CC       phosphorylase, myosin light chain and myosin substrates (By
CC       similarity).
CC   -!- SUBUNIT: Binds PP1.
CC   -!- SUBCELLULAR LOCATION: Attached to the plasma membrane (By
CC       similarity).
CC   -!- SIMILARITY: Contains 5 ANK repeats.
CC   -!- CAUTION: Ref.1 sequence may be incorrect due to a cloning
CC       artifact.

CC   -!- FUNCTION: Endoribonuclease, mediator of interferon action, which
CC       play a role in mediating resistance to virus infection and
CC       apoptosis. Might play a central role in the regulation of mRNA
CC       turnover.
CC   -!- CATALYTIC ACTIVITY: Cleaves 3' of UpNp dimers, with preference for
CC       UU and UA sequences, to sets of discrete products ranging from
CC       between 4 and 22 nucleotides in length.
CC   -!- COFACTOR: Optimal RNA cleavage rates requires the presence of
CC       either manganese or magnesium and ATP.
CC   -!- ENZYME REGULATION: After binding to 2-5A (5'-phosphorylated 2',5'-
CC       linked oligoadenylates) the homodimerization and subsequent
CC       activation occurs. Inhibited by RNase L inhibitor.
CC   -!- SUBUNIT: Monomer (inactive form) or homodimer.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic and mitochondrial.
CC   -!- TISSUE SPECIFICITY: Expressed in spleen, thymus, lung, testis,
CC       kidney, liver and heart.
CC   -!- INDUCTION: By interferons.
CC   -!- DOMAIN: A single active nuclease domain in a dimer is
CC       sufficient for ribonuclease activity.
CC   -!- DOMAIN: The kinase domain allows the homodimerization.
CC   -!- DOMAIN: The nine ankyrin repeats also called 2-5A sensor
CC       constitute the 2-5A binding domain.
CC   -!- SIMILARITY: Contains 9 ANK repeats.

CC   -!- FUNCTION: May be a downstream target for TGF-beta1 signaling
CC       cascade in endothelial cells.
CC   -!- SUBUNIT: Binds PP1 (Probable).
CC   -!- SUBCELLULAR LOCATION: Attached to the plasma membrane (Potential).
CC   -!- TISSUE SPECIFICITY: Highly expressed in vascular endothelium, CNS,
CC       lung, spleen, kidney and testis.
CC   -!- INDUCTION: Inhibited by TGF-beta1.
CC   -!- SIMILARITY: Contains 5 ANK repeats.

CC   -!- FUNCTION: P100 is the precursor of the p52 subunit of the nuclear
CC       factor NF-kappa-B, which binds to the kappa-B consensus sequence
CC       5'-GGRNNYYCC-3', located in the enhancer region of genes involved
CC       in immune response and acute phase reactions. The precursor
CC       protein itself does not bind to DNA. Isoform p49 is a subunit of
CC       the NF-kappa-B protein complex, which stimulates the HIV enhancer
CC       in synergy with p65.
CC   -!- SUBUNIT: Active NF-kappa-B is a heterodimer of an about 52 kDa
CC       DNA-binding subunit and the weak DNA-binding subunit p65. Two
CC       heterodimers might form a labile tetramer.
CC   -!- SUBCELLULAR LOCATION: Nuclear, but also found in the cytoplasm in
CC       an inactive form complexed to an inhibitor (I-kappa-B).
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=2;
CC       Name=p100;
CC         IsoId=Q00653-1; Sequence=Displayed;
CC       Name=p49;
CC         IsoId=Q00653-2; Sequence=VSP_005585, VSP_005586;
CC   -!- DOMAIN: The C-terminus of p100 might be involved in cytoplasmic
CC       retention, inhibition of DNA-binding by p52 homodimers, and/or
CC       transcription activation (By similarity).
CC   -!- DISEASE: In cutaneous T-cell leukemia (CTCL) cell line HUT 78, a
CC       rearranged NFKB2 gene is found which encodes for a truncated 80
CC       kDa protein (p80HT).
CC   -!- SIMILARITY: Belongs to the Rel/Dorsal family.
CC   -!- SIMILARITY: Contains 7 ANK repeats.
CC   -!- SIMILARITY: Contains 1 death domain.
CC   -!- DATABASE: NAME=Atlas Genet. Cytogenet. Oncol. Haematol.;
CC       WWW="http://www.infobiogen.fr/services/chromcancer/Genes/NFKB2ID362.html".
